

Chapter 14

Environment and Life

©Chuo City Tourism Association

A scene from the "Nihombashi Bridge cleanup" in Chuo-ku, Tokyo. In 2011, Nihombashi Bridge entered the 100th year of its existence after it was rebuilt as the stone bridge that stands today. Not only recognized as Japan's Important Cultural Property, the bridge is now a symbol of Edo and of Japan.

1. Environmental Issues

The list of environmental issues is wide-ranging, from waste management to global warming. Japan is, while pursuing regional development at home, taking the initiative in efforts to prevent global warming and conserve the natural environment to help achieve sustainable growth of the entire world.

In fiscal 2009, Japan's total emission of greenhouse gases, which are a major cause of global warming, amounted to 1.21 billion tons (calculated after their conversion into carbon dioxide), representing a decrease of 5.6 percent from the previous fiscal year. Carbon dioxide accounted for 95 percent of these greenhouse gases, with an emission volume of 1.15 billion tons. A breakdown of carbon dioxide emissions by sector revealed that emissions from the industrial sector accounted for 34 percent of the total, followed in order by emissions from the transport sector, the commercial sector (office buildings, etc.), the residential sector, and the energy sector (electric power plants, etc.).

Table 14.1
Breakdown of Carbon Dioxide Emissions in Japan ¹⁾

Item	(Million tons)					
	FY1990	FY1995	FY2000	FY2005	FY2008	FY2009
Total	1,141	1,224	1,252	1,282	1,213	1,145
Industrial sector	482	471	467	459	419	388
Transport sector	217	258	265	254	235	230
Commercial sector	164	185	206	236	234	216

The state of waste management in Japan had remained grave due to the shrinking remaining capacity of final disposal sites and increased illegal dumping. This led to the Basic Act for Establishing a Sound Material-Cycle Society (brought into force in January 2001), which defines basic principles for the creation of a sound material-cycle society. This law has established a legal framework to address issues such as waste disposal and automobile and electrical appliance recycling. Other ongoing efforts include promotion of the "3Rs" (reduce, reuse and recycle) in waste management, and research and development for the use of waste as a source of energy, with a view to generating a synergy between efforts to manage waste and tackle global warming.

Of various types of waste generated as a result of business activities, 20 of them, including sludge, waste oil, and soot and particulates, are designated as "industrial waste." The fiscal 2008 nationwide industrial waste generation totaled 403.66 million tons. Sludge, animal waste and debris, which account for approximately 80 percent of the total industrial waste, are now increasingly recycled into construction materials, organic fertilizers, and other materials. Thanks to this development, the volume of final disposal (to be put into landfills) fell from 89.73 million tons in fiscal 1990 to 16.70 million tons in fiscal 2008.

Meanwhile, a total of 48.11 million tons of "nonindustrial waste" (household waste and also shop, office and restaurant waste) was generated in fiscal 2008. This translates to 1,033 grams per person per day. In terms of nonindustrial waste disposal in fiscal 2008, the total volume processed was 45.14 million tons. The total volume of recycled waste was 9.78 million tons, with the recycling rate at 20.3 percent.

Table 14.2
Waste Generation and Disposal (Industrial and nonindustrial waste)

	(Thousand tons)				
Item	FY1990	FY1995	FY2000	FY2005	FY2008
Industrial waste					
Total volume of waste generation	394,736	393,812	406,037	421,677	403,661
Recycling	150,568	146,620	184,237	218,888	216,507
Treatment for waste reduction	154,443	177,941	176,933	178,560	170,453
Final disposal	89,725	69,257	44,868	24,229	16,701
Nonindustrial waste					
Total volume of waste generation	52,224	54,834	52,720	48,106
Municipally scheduled and collected	42,495	44,100	46,695	44,633	40,946
Directly brought to					
waste treatment facilities	6,776	5,806	5,373	5,090	4,234
Recyclable waste					
collected by community	986	2,318	2,765	2,996	2,926
Waste generated					
daily per person (in grams)	1,115	1,138	1,185	1,131	1,033
Total volume of processed waste	49,282	49,899	52,090	49,754	45,136
Direct incineration	36,192	38,048	40,304	38,486	35,742
Intermediate treatment for recycling, etc.			6,479	7,283	6,232
Direct recycling	3,300	6,131	2,224	2,541	2,341

2. Housing

According to the Housing and Land Survey conducted in October 2008, the total number of dwellings (in case of apartment buildings, counting the number of component apartments) in Japan was 57.59 million, up by 3.70 million (6.9 percent) from 2003. The number of households was 49.97 million, representing the excess in number of dwellings over households by 7.61 million.

In 2008, the number of occupied dwellings (where people usually live) amounted to 49.60 million, accounting for 86.1 percent of the total number of dwellings. Of these, the number of dwellings used exclusively for living

totaled 48.28 million, accounting for 97.3 percent of the occupied dwellings.

A breakdown of occupied dwellings by class of ownership showed that owned houses totaled 30.32 million, accounting for 61.1 percent of the total, which represented a decrease of 0.1 percentage point from the figure of 61.2 percent in 2003. Rented houses, on the other hand, numbered 17.77 million, accounting for 35.8 percent of the total.

Table 14.3
Housing Conditions

Year	Total households	Total number of dwellings	Occupied dwellings	Ownership		Dwellings exclusively for living	Floor space per dwelling (m ²)
				Owned	Rented		
1983	35,197	38,607	34,705	21,650	12,951	31,935	81.6
1988	37,812	42,007	37,413	22,948	14,015	34,701	85.0
1993	41,159	45,879	40,773	24,376	15,691	38,457	88.4
1998	44,360	50,246	43,922	26,468	16,730	41,744	89.6
2003	47,255	53,891	46,863	28,666	17,166	45,258	92.5
2008	49,973	57,586	49,598	30,316	17,770	48,281	92.4

Table 14.4
Occupied Dwellings by Type of Building

Year	Total	Detached houses	Tenement houses	Apartments	Others
1988	37,413	23,311	2,490	11,409	203
1993	40,773	24,141	2,163	14,267	202
1998	43,922	25,269	1,828	16,601	224
2003	46,863	26,491	1,483	18,733	156
2008	49,598	27,450	1,330	20,684	134

Source: Statistics Bureau, MIC.

Occupied dwellings by building type showed that 27.45 million or 55.3 percent were detached houses, and 20.68 million or 41.7 percent were apartments. The proportion of apartments has consistently increased in recent years.

In terms of construction materials, 25.42 million or 92.6 percent of the detached houses were wood-frame houses (including fire-resistant ones). On the other hand, 15.04 million or 72.7 percent of the component apartments were steel-framed concrete structures.

A study of housing with accessibility equipment for the elderly and physically challenged persons showed that the number of housing units "with equipment for the elderly, etc." was 24.15 million, or 48.7 percent of all housing, up 8.9 percentage points from 18.66 million (39.8 percent) in 2003. Housing "equipped with handrails" accounted for 37.3 percent of all housing, and housing with a "step-free interior" made up 20.0 percent. Figures increased from 2003 in all categories of equipment surveyed.

3. Traffic Accidents

In 1970, the annual number of fatalities from traffic accidents hit a record high of 16,765, leading to the enactment of the Traffic Safety Measures Basic Law in the same year. Based on this law, the government has since promoted traffic safety measures in a comprehensive and systematic manner. As a result, the number of traffic accident fatalities declined to 4,914 in 2009, being about one third of that of 1970.

In 2009, traffic deaths per 100,000 population were 3.9 persons, while the number of persons killed per 10,000 motor vehicles was 0.6 persons.

Table 14.5
Traffic Accidents and Casualties

Year	Traffic accidents	Injuries	Deaths ¹⁾	Traffic deaths ¹⁾	
				per 10,000 motor vehicles	per 100,000 population
1970	718,080	981,096	16,765	9.0	16.2
1980	476,677	598,719	8,760	2.2	7.5
1990	643,097	790,295	11,227	1.9	9.1
2000	931,934	1,155,697	9,066	1.2	7.1
2005	933,828	1,156,633	6,871	0.9	5.4
2008	766,147	945,504	5,155	0.7	4.0
2009	736,668	910,115	4,914	0.6	3.9

4. Crime

In 2010, the reported number of penal code offenses (excluding cases related to traffic accidents) was 1.59 million, a decrease of 117,188 (6.9 percent) compared to the previous year. The proportion of thefts was the highest, accounting for approximately 77 percent, or 1.21 million cases (down 6.6 percent from the previous year).

The number of persons arrested for penal code offenses was 322,620 in 2010, a decrease of 10,268 (3.1 percent) compared to the previous year, marking a six-consecutive-year decline.

The ratio of arrests to reported number of offenses marked a post-World War II low at 19.8 percent in 2001. Since 2002, however, it has shown signs of recovery, accounting for 31.4 percent in 2010.

Table 14.6
Trends in Crime (Penal code offenses) ¹⁾

Year	Reported offenses	Resultant arrests	Persons arrested	Arrest rate ²⁾ (%)	Crime rate per 100,000 population
1980	1,357,461	811,189	392,113	59.8	1,159.6
1985	1,607,697	1,032,879	432,250	64.2	1,328.1
1990	1,636,628	692,593	293,264	42.3	1,324.0
1995	1,782,944	753,174	293,252	42.2	1,419.9
2000	2,443,470	576,771	309,649	23.6	1,925.5
2005	2,269,293	649,503	386,955	28.6	1,775.7
2009	1,703,044	544,699	332,888	32.0	1,335.7
2010	1,585,856	497,356	322,620	31.4	1,238.0

Various kinds of computers and computer networks are currently playing an essential role as a social foundation. In line with this, crimes utilizing computer networks are becoming increasingly diversified. The number of arrests for cybercrime in 2010, involving the abuse of computer technology and telecommunications technology, was 6,933, up 3.6 percent from the previous year. This represented about an eightfold increase from the 913 cases registered in 2000.

The police organization consists of the National Public Safety Commission and the National Police Agency, both of which are state organizations, as well as the Prefectural Public Safety Commission and prefectural police, both of which are organizations under the authority of individual prefectures. As of April 2010, the prefectural police operated police headquarters, police schools, 1,184 police stations, 6,232 police boxes (*Koban*) and 6,847 police substations in 47 prefectures.

Local police officers at their respective police boxes/substations are engaged in standing guard over their communities, patrolling, and dealing with criminal cases and accidents to prevent crimes and catch criminals.
