

## Summary of the Results

The tabulation on place of work or schooling is designed to provide statistics on the daily movement of workers and students commuting between their homes and places of work or schooling and economic characteristics of commuters. The results of this tabulation are also used to calculate the daytime population in each municipality to be compared with each nighttime population, that is, the de jure population.

○ The proportion of employed persons working in the same shi, ku, machi or mura is the highest among 65 years and over both male and female

Among employed persons 65 years of age and over, the proportion of employed persons working in the same shi, ku, machi or mura is 73.4% among male and 84.0% among female. This percentage is the highest in age groups both male and female. With regard to employed persons working in other shi, ku, machi or mura, 40-44 years old (56.5%) is the highest among male and 25-29 years old (52.9%) is the highest among female.

Proportion of employed persons 15 years of age and over, based on place of usual residence, by place of working, age (5-year groups) and sex - Japan:2010

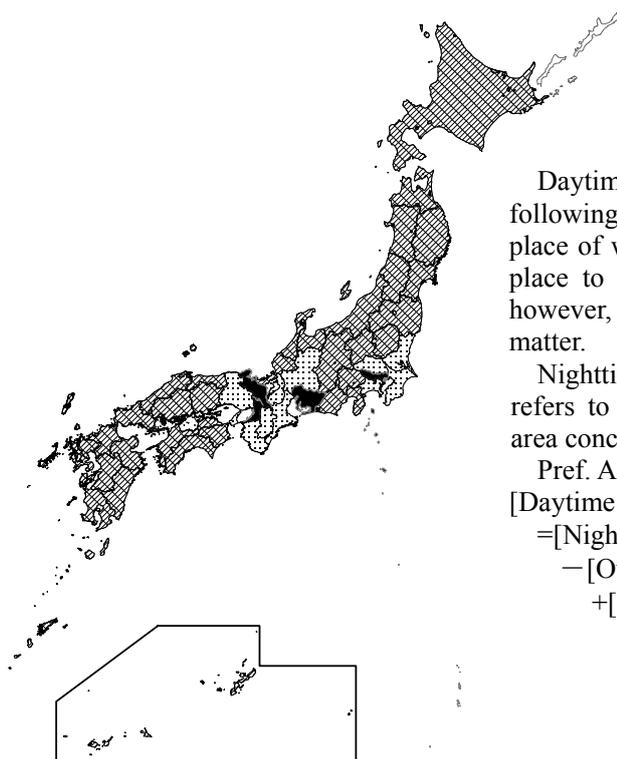

Employed persons, sex and age (5 year groups)	Proportion (%)						
	Total	Working in the same shi,ku,machi or mura			Working in other shi,ku,machi or mura		
		At home	In other place than home	Same prefecture	Other prefectures	Same prefecture	Other prefectures

- The ratio of daytime population to nighttime population is high in Tokyo-to, Osaka-fu, and Aichi-ken, and is low in their neighboring prefectures.

According to the daytime population by prefecture, Tokyo-to has the largest daytime population of 15.576 million, followed by Osaka-fu (9.281 million), Kanagawa-ken (8.254 million), etc.

The ratio of daytime population to nighttime population (proportion of the daytime population per 100 persons of nighttime population) is 118.4 in Tokyo-to, 104.7 in Osaka-fu and 101.5 in Aichi-ken. In contrast, Saitama-ken has the lowest ratio of daytime population to nighttime population of 88.6, followed by Chiba-ken (89.5), Nara-ken (89.9), etc. Prefectures showing a low ratio of daytime population to nighttime population are concentrated in the areas adjacent to Tokyo-to, Osaka-fu and Aichi-ken.

#### Ratio of Daytime Population to Nighttime Population by Prefecture: 2010

Daytime population is calculated by the following formula using the tabulated results of place of work or schooling. Travelling from one place to another for shopping etc. in daytime, however, is not taken into account for that matter.

Nighttime population (*de jure* population) refers to the population usually residing in the area concerned at the time of the census.

Pref. A, as an example:

$$\begin{aligned} &[\text{Daytime population of Pref. A}] \\ &= [\text{Nighttime population of Pref. A}] \\ &\quad - [\text{Outflow population from Pref. A}] \\ &\quad + [\text{Inflow population to Pref. A}] \end{aligned}$$

#### Trends in Daytime population, Nighttime population and Ratio of Daytime population to Nighttime population - Prefecture: 2005 to 2010

Prefecture	Daytime Population (thousand)		Nighttime population (thousand)		Ratio of Daytime population to Nighttime population		Prefecture	Daytime Population (thousand)		Nighttime population (thousand)		Ratio of Daytime population to Nighttime population
