

Notes on the Use of Statistical Tables

- The total and actual sum of each item are not necessarily equal since the numbers are rounded to certain numbers of significant digit.
- In the statistical tables, “-” indicates there is no relevant data, and “X” indicates the corresponding value is kept confidential.
- “Service industry” in the statistical tables exclude information and communication industries because enterprises, etc. and establishments engaged in “G Information and communications” are not surveyed in the Annual survey (the Expanded survey) in contrast to the Monthly survey.
- In the Annual survey, for enterprises, etc. conduct multiple businesses, “Annual Sales” and “the Number of Persons Working at the Location of Establishment” are surveyed for each business activity.
 - Statistical tables from table one to five and from table 11-1 to 13 are aggregated by industry for each business activity. “Business activities other than industries subject to survey” and “business activities not included in the top 4 sales of the industries surveyed” of the companies surveyed are categorized as “Others”. The value of “Number of Persons Working at the Location of Establishment” is the total number of persons, since one person may engage in multiple business activities.
 - Statistical tables from table six to ten are aggregated by industry of establishment and enterprise, etc.
- “Annual Sales” correspond to the sales made during 2013. “The Number of Persons Working at the Location of Establishment” is as of the end of June 2014. “Annual Sales per Person Working at the Location of Establishment” is the value “Annual sales” divided by “Annual Sales per Person Working at the Location of Establishment”.
- Figures of the results of the survey in 2013 are revised values, which are used for calculating the changes over previous year reported on statistical table one and six.
