Appendix 1 Sampling Design for CIPS 2013

(Sampling frame)

The sampling frame used for 2013 CIPS was the complete list of all EAs of the 2008 General Population Census of Cambodia. The list was updated to reflect administrative changes since the last census up to September 2011. The main administrative change was the relocation of the boundary between Kandal and Phnom Penh provinces with the result that 20 communes were shifted from Kandal to Phnom Penh. Taking into account all changes, some geographic areas were recoded for construction of a revised and updated sampling frame for use in the two-stage sample design for CIPS 2013.

(Stratification)

In order to obtain reliable estimates for each province, the sampling frame was stratified by province. Within a province a further stratification by urban and rural was done.

(Sample size and sample allocation)

With a margin of error of 2.8% at a confidence level of 95%, sampling of households was done assuming a simple random sampling design. An approximately almost equal number of households, about 1,200 households were allocated to each province as shown in the table below.

(Sampling design)

The sample design was a stratified two-stage sampling design with Enumeration Areas (EAs) as Primary Sampling Units (PSUs), and households as Secondary Sampling Units (SSUs).
