CHAPTER - 1 Introduction

- 1. The first Population and Housing Census of Cambodia in 36 years was held in March 1998. Before 1998 it was in 1962 that a census was conducted. No census could be conducted in Cambodia for 36 years due to disturbed conditions. Exactly ten years after the 1998 census the next census is being conducted in 2008. The Statistics Law specifies that the Population Census should be conducted at least once every ten years. You are privileged to be a census enumerator and take part in this great task. You are performing a duty which is of national importance. While you are privileged to be a census enumerator, you have a big responsibility as well. You have to fulfil it with a sense of pride and devotion to duty. Please read this instruction manual thoroughly which will help in discharging your duties satisfactorily.
- 1.1 This chapter gives the background and objectives of the General Population Census of Cambodia, 2008. It also explains the various uses of census data and some facts about the census undertaking.

The General Population Census

- 1.2 A census of population refers to the entire process of collecting, compiling, evaluating, analysing and publishing data about the population of a country. It involves listing of persons and recording the characteristics of every one of them as at a specified time. When the information thus collected in the census are compiled and analysed we get to know about the size and distribution of the population as well as its demographic, social, economic and cultural characteristics. These are very essential for making suitable plans and programs for national and local development.
- 1.3 In February-March 2008, the census of population called the General Population Census of Cambodia will be conducted throughout the country. The General Population Census of Cambodia, 2008 will collect basic demographic, economic, social and cultural information of each individual as well as some information on buildings occupied by households and housing conditions and facilities available to households. This will help update population number and characteristics and estimate population growth rate from national up to village level.

Objectives of the 2008 Census

General Objectives

2. The 2008 Census seeks to create an inventory of the country's manpower resources and demographic characteristics as at a given time. Only the census can provide data for small areas (e.g. village) for local planning purposes.

Specific Objectives

- 2.1 In particular, the 2008 Census aims to:-
 - (1) Obtain an up-to-date count of the population by age and sex.
 - (2) Give the geographic distribution of the population by demographic and socio-economic characteristics.
 - (3) Provide frames for surveys and other statistical programs.

Uses of Census Data

- 3. The census data are required not only for administration but for also for economic and development planning. The ultimate aim of such planning is to provide a better way of life for the people of Cambodia. This will include reduction of poverty, increasing employment opportunities, improving the educational levels of the population and providing health for all.
- 3.1 Planning for education obviously requires knowledge of the number of children of school age who are likely to require schooling at various levels. The Government cannot know where to build the necessary schools or how many school teachers must be trained unless it knows where the need is great in terms of the number of children who should be going to school.
- 3.2 The Government wishes to improve and extend the medical services of the country so as to eliminate diseases and to reduce the number of children dying in infancy and early childhood. But if medical services are to be planned properly, the Government must know the number of people involved the number of children being born and the rate at which they are dying.
- 3.3 For providing these services, it is not enough just to know how many people there are at the time of the census because figures of this kind get out-of-date very quickly. We must know also how fast the population is increasing, so that the Government could know how many people there will be, not only this year but also next year, in five years, in ten years time etc. We therefore obtain information not only of people now living, but also of the number of children being born and the number of children who have died.
- 3.4 For planning for proper housing and to improve amenities like electric supply, drinking water, sewerage etc. the census data will provide guidelines to the planners and administrators. Census data will also be useful in several ways in trade, commerce, industry and in population research.

Census Date and Reference Time

- 4. March 3, 2008 has been designated as the census day. The reference time for the 2008 Census is 00:00 hours of March 3, 2008. This means that the 2008 Census is expected to provide the population of Cambodia as at 00:00 hours of March 3, 2008.
- 4.1 The preliminary work of houselisting (i.e. listing of buildings and households) will, however, commence on February 29, 2008. Following is the calendar of the 2008 Census Operations:-

Date February 29 to March 2, 2008 (3 days)	Name of operation Houselisting
March 3 to 13, 2008 (11 days)	Census Enumeration
March 14-16, 2008 (3 days)	Collection of filled-in records in the Commune offices
March 20 – 31, 2008 (12 days)	Receipt of census records at NIS

Authority for the 2008 Census

5. The 2008 census is conducted under the authority of (i) the Royal Decree (Kret) No. JS/RKT/02-96/08 dated February 29, 1996 on the organization of the General Population Census of Cambodia (ii) The Statistics Law enacted on May 9, 2005 and (iii) Sub-Decree No. 08 dated 30 January 2006. The Sub-decree specifies the census date as March 3, 2008 and deals with organizing and functioning of the 2008 Census.

Field Organisation of the Census

6. The National Census Committee for the General Population Census of Cambodia constituted by the Sub-decree under the chairmanship of HE Deputy Prime Minister and Minister of Interior has the responsibility for instructing, deciding and endorsing all general items of work related to the census. During the conduct of the census, the population census office of the NIS under the Director General of Census will be the central unit that will serve as the monitoring and communication and action centre for the census. It will have separate divisions each in charge of an activity like administration, planning and monitoring etc. In the field, the NIS Regional Officer (RO) will act as the co-ordinator for his / her region and will be responsible for the operations in the region.

- 6.1 The Province Director of Planning will act as the provincial census officer for his / her province and will be responsible for the operations in the province. In technical matters he/she will be assisted by the Assistant Regional Officer who will be a NIS Officer.
- 6.2 The District Chief assisted by his staff will be the officer in charge of census operations in the District. The Commune Chief will be the census charge officer for the commune. He/she will be assisted in technical matters by an officer from Province / District Offices and Area Supervisors. Enumerators will be drawn from school teachers and other officials at the rate of one enumerator for an EA or Enumeration Area (about 100 households or 500 to 600 population). Generally one supervisor will be appointed to closely supervise the work of four enumerators. Outside the NIS, special bodies will be created to make possible the much needed interagency co-operation and involvement in conducting the census successfully. Figure 1 shows the organisational structure of the 2008 Census.

2008 General Population Census of Cambodia Organization Chart

Important Provisions of the Royal Decree on Census

- 7. For your reference and information, certain important provisions of the Royal Decree (Kret) on the Organisation of the General Population Census of Cambodia are reproduced below:-
- **Article 7:** All owners and occupants of houses and managers of other places must allow census officers access thereto as they may require for the purpose of the census and must allow them to paint on, or affix to, the place such letters, marks or numbers as may be necessary for the purposes of the census.
- Article 8: Census Officer may ask all questions mentioned in the census questionnaire during the census operation of the head of the household or all members of the household within the local area for which he/ she is appointed as the census officer.
- **Article 9:** Every person, of whom any question is asked under Article 8, shall be legally bound to answer such questions to the best of his/ her knowledge and belief.
- Article 12: Personal information collected in the census operations must be used for statistical purposes only. Such information may not be given to the tax units, or to courts for use in prosecutions or to any other organisation under any circumstances or motivations. Any claim allowed in court or any obligation to pay taxes based on personal information obtained in the census operations is void.
- 7.1 Articles 13 and 14 lay down penalties for certain offences committed in this connection. For example, the following are punishable offences: (i) any census officer appointed by the Government for census work who refuses to do that work or does not complete his /her task (ii) any census officer who makes any false return to the census office (iii) any census officer who discloses any information received in the census (iv) any person who intentionally gives a false answer or refuses to answer the questions asked by a census officer. The Statistics Law (Article 22) also states that staff and employees shall ensure confidentiality of all individual information collected from respondents except under special circumstances with the consent of the Ministry of Planning. Articles 23 to 25 provide for other rights and obligations. Articles 26 to 29 provide for penalties for violation of the Law.
- 7.2 Please take note that according to the above provisions of the Royal Decree and Statistics Law you have to perform your duty as 2008 Census Officer diligently and keep the information collected at the census confidential, to be used for statistical purposes only.

The 2008 Census Schedules

- 8. The 2008 Census will gather information through two schedules Form A: Houselist and Form B: Household Questionnaire. (See Appendix I and II) Form A: Houselist which will be canvassed during the preliminary round (February 29 to March 2, 2008) will be used to collect the following information in respect of buildings which have households in them: Building / Structure number*, predominant construction material of wall, roof and floor of building, whether building is wholly or partly residential, household number, and name and sex of head of household and number of persons usually living in the household.
- 9. Form B: Household Questionnaire has five parts: Parts 1, 2, 3, 4 and 5. This will be used for census enumeration during March 3 to 13, 2008 in all households. In Part 1, information on usual members of household present on Census Night (March 2-3, 2008), visitors present on Census Night and usual members absent on Census Night will be collected.
- 10. Part 2 of Form B, will be used to collect the following information in respect of each usual member of household present and each visitor to household: Full name, relationship to head of household, sex, age, marital status, mother tongue, religion birth place, previous residence, duration of stay, reason for migration, literacy, full time education physical or mental disability and economic characteristics.
- 11. In Part 3 of Form B, fertility information of females aged 15 and over in the household will be collected. In Part 4 of Form B, following information will be collected on housing conditions and facilities of household: basis of occupation of the dwelling by household (like owner occupied or rented), main source of light available for the household, main cooking fuel used by household, whether toilet facility is available within premises, main source of drinking water supply for the household, with location of source, number of living rooms occupied by household and whether following facilities are available: radio/transistor, television, telephone, personal computers, cell phone, bicycle, motorcycle, car and tractor. Information on whether the household has access to Internet will also be collected.
- 12. The above information will help in knowing the demographic and housing characteristics of the country as a whole. It is, therefore, very necessary that the information is collected as accurately as possible. The Enumerator's work will be closely supervised by a Supervisor and other supervising officers.

12.1 Enumerator's kit

The enumerator's kit in a bag will contain the following: - 1. Form A Houselist; 2. Form B Household Questionnaire; 3. Enumerator's Manual; 4. Conversion Table for Age; 5. Chalk piece; 6. Form 1 Houselist Summary; 7. Form 2 Enumerator's Summary; 8. Form 3 Account for Questionnaires

7

^{*} Wherever the word building is used hereinafter it refers to a building or a structure (Building/ Structure).

Received; 9. Call Back Card; 10. Note Book; 11. Pencil; 12. Eraser; 13. Sharpener; 14. Ball point pen; 15. Training Form A; 16. Training Form B; 17. EA Map / Village Map; 18. Blank EA Map Form; 19. White Paper; 20. Form 4 Certificate of Village Chief 21.

Please satisfy yourself that you have all the items as mentioned above in the kit.

CHAPTER - 2

Filling-in of Form A: Houselist

The Houselist

- 13. Form A Houselist will be filled in as a preliminary operation for three days preceding the Census Night. Before the census enumeration is taken up, it is essential to locate and identify all places which are occupied or used or which are likely to be occupied or used by people. The houselisting operations are mainly meant for this purpose and houselisting is a primary but important step in the census. The houselist will help identify households first before the enumeration is done. It will also provide preliminary information on the number of persons usually living in the household or usual members of the household.
- 14. The houselist which is proposed to be filled during the houselisting operations is given at the end of this book (Appendix I). It will be noted that the Form is simple. The manner in which the houselist has to be completed and the concepts and their explanation are described in detail in this chapter. It is absolutely essential for you to become thoroughly familiar with these instructions since this job of houselisting is an extremely important one. Apart from listing of houses you will also be collecting some useful data on housing which are required for planning purposes. The success of the houselisting operations is very much dependent on a thorough understanding of the concepts, definitions and instructions and on a faithful application of these concepts and definitions and following the instructions in the actual filling of the houselist form. If you have any doubt you should not hesitate to ask your supervisor for clarification.
- 15. The houselisting operations will involve certain basic steps which may be briefly summarised as follows:
- (i) Updating Enumeration Area Map (EA map) given to you in respect of your Enumeration Area (EA).
 - (ii) Numbering of buildings and households in your EA and marking them on the EA Map.
 - (iii) Filling in the houselist itself.
- 16. The procedure for updating EA map is first described and after that the basic concepts relating to a building and a household are described. This is followed by the actual instructions with regard to filling in the houselist.

Updating EA Map

- 17. In order to be able to complete the houselist, it would be necessary to locate and identify the buildings and households. This can be done only if you are thoroughly familiar with the area assigned to you for these operations. The purpose of the EA map is to help you to understand your jurisdiction or EA. Also, it is only if an EA map is with you that it will be possible for you to allot building numbers in a systematic manner. The first step, therefore, is to update the EA map and mark the residential and partly residential buildings.
- 18. The EA map that will be given to you is a sketch map which is not drawn to scale. It was prepared a few months ago and therefore, may require updating. An EA may include a village or part of a village (in case of a big village). EAs are delineated or formed in such a way that no building or structure with one or more households is left out. The EA map shows the general topographical details. The topographical details indicated on the EA map include permanent features and landmarks such as the village site, well-known roads, cart tracks, hills, rivers etc., as also railway line, hospitals, schools, pagodas and similar clearly recognisable physical features. You may update the EA map first in consultation with the village chief concerned. Verify whether these recognisable features are found in their proper places in the EA map. You may make the necessary corrections by adding any new feature noticed by you or deleting any non-existing feature. If you find any new residential area not marked, you may indicate the same on the EA map.
- 19. The next step is to locate every single building occupied by one or more households in the EA. Such buildings should be marked on the EA map as indicated below:

	Building wholly used for residential purpose	
	Building used both for residential and non-res	idential
ourposes (e.g.	residence and shop, residence and	d hand-
oom weaving, resid	ence and workshop	etc.).

20. When once the location of every building used wholly or partly for residential purposes is demarcated on the EA map it will be a simple matter to decide on numbering the buildings. No hard and fast rule can be laid down as to the direction in which the building numbers should run *i.e.* left to right or in a clockwise order or north-west to south-east and so on. Much depends on the lay-out. What is expected is that some convenient and intelligible order is followed.

Numbering of Buildings

21. The instructions given hereafter will guide you to determine a building for the purpose of houselisting. A building is a readily distinguishable structure or group of structures which is taken as the unit for building numbering. The objective is to ultimately number and list out

all physical units of constructions which are used for residential purposes, either wholly or partly.

- 22. Building: A building is generally a single structure on the ground. It is covered by a roof and usually enclosed within external walls or with common dividing walls with adjacent buildings. In some areas the very nature of construction of houses is such that there may not be any wall. For example a conical roof almost touches the ground and an entrance is also provided and there will not be any wall as such. Such structures should be treated as buildings. Sometime a building is made up of more than one component unit which are used or likely to be used as dwellings (residences) or as establishments such as shops, business houses, offices, factories, workshops, work-sheds, schools, places of entertainment and places of worship or as godowns, stores, animal sheds, etc. It is also possible that buildings which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence, etc.
- 23. Sometimes a series of different buildings may be found along the street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically independent of one another and likely to have been built at different times and owned by different persons. In such cases though the whole structure with all the adjoining units apparently appears to be one building, each portion should be treated as a separate building and given separate numbers. You may also come across cases, particularly in Phnom Penh, of multi-storied flats. In these cases while the structure looks like one building, the flats are occupied by different households. In the case of such multi-storied structures, having a number of flats occupied by different households, each flat should be treated as one building and given a building number and each household in that flat should be identified and enumerated. However a building with ground floor and one, two or three floors will not be treated as a multi- storied building. In that case each household occupying that building will be treated as a household belonging to that building and will not be given a separate building number.
- 24. If there is more than one structure within an enclosed or open compound (premises) belonging to the same person, e.g., the main house, animal shed, sitting place, garage etc., only one building number should be given for this unit
- 25. The buildings should be numbered in a systematic manner as follows:
- (i) Only buildings containing households and vacant buildings should be numbered for listing. Thus, buildings which are wholly residential and buildings which are partly residential and partly non-residential (like a shop in which a family is also living; an office in which the watchman is living etc.) should be numbered. Buildings which are wholly used for non-residential purposes need not be numbered.

- (ii) If an EA consists of a number of streets, the buildings in the various streets should be numbered continuously. Streets should be taken in uniform order from North-west to South-east. It has been observed that the best way of numbering the buildings is to continue with one consecutive serial on one side of the street and complete numbering on that side before crossing over to the end of the other side of the street and continuing with the serial, stopping finally opposite to where the first number began.
- (iii) In a town / city EA, the numbering will have to run along the street and not in any arbitrary geographical direction.
- (iv) Three digit numbers should be used for building numbers like 001, 002... 999. Building number should be painted or marked on a sticker to be pasted at the entrance of the building in a manner that it can easily catch the eyes of any observer. While painting (or marking on a sticker) the building number, the letter C may be marked before it like C 008, C 021 etc. to distinguish our numbering ("C" standing for Census) from other numbers which the building may have.
- 26. In some cases, the pattern of habitation may be such that a group of huts located in a compound, whether enclosed or not enclosed is occupied by one household. While the main residence may be located in one hut, other huts may be used for sleeping or as kitchen, bathroom, etc. Though each of the huts is a separate structure, they form a single housing unit and therefore, have to be treated collectively as a single building/structure for the purpose of the census. If some of the huts are used by one household and the others by a second household as residence, then the two groups of huts should be treated as two separate building units. You may also find people living in floating houses near the bank of river which are fixed and do not move from place to place like boats. These floating houses may be treated as buildings/structures and numbered along with other buildings in the EA concerned. Some people may be living in caves, big steel containers or unserviceable buses which are fixed to the ground. These may be also considered as buildings/structures of the EA concerned and numbered.

Household

27. A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be a household of persons related by blood or a household of unrelated persons or having a mix of both. Examples of unrelated households are boarding houses, messes, hostels, residential hotels, rescue homes, jails, pagodas, etc. These are called "Institutional Households". There may be one- member households, two-member households or multi-member households. For census purposes each one of these types is regarded as a "Household".

- 28. If a group of persons who are unrelated to each other live in a building/structure, but do not have their meals from a common kitchen, then they would not constitute an Institutional household. Each such person should be treated as a separate household. The important link in finding out whether there is a household or not, is the existence of a common kitchen.
- 28.1 Each household in a building will be allotted numbers like 01, 02 etc., and will be listed according to the instructions that follow. As each household will be related to the physical structure of a building, the household number as such may not be painted (or marked on a sticker) on the door of each building. In case there are several households in a building (e.g. flats) household numbers may be painted on the door (or marked on a sticker) for easy identification.

Marking Building Numbers on EA Map

- 29. The numbers allotted to each building and the number of households contained in each building should be marked on the EA map as shown below:
- (2)
 Building No. 1 having two households living in it
 001
- (1)
 Building No. 3 which is used both for residential and nonresidential
 003 purposes and having one household living in it
- 29.1 With the help of arrow marks at convenient intervals, the direction in which the building numbers run should be indicated.
- 29.2 Specimen map of a village with two EAs and specimen map of EA 1 of that village after listing and updating, may be seen at Appendix III (A) and Appendix III (B).

Houselisting

- 30. After numbering of building and marking on EA map, the next step is to list the building and household in a prescribed schedule, namely the Houselist. At the census this form called Form A: Houselist (see Appendix I), will be canvassed by you in the first stage.
- 30.1 You have to visit every building in your EA and make sure to list buildings which have households or persons living in them. You have to be careful in the case of office and business buildings as watchman or some members of staff may use them as premises. You must include such buildings

used for both residential and non-residential purposes in the list. Vacant buildings and locked-buildings occupied by households should also be included in the list.

30.2 The instructions given below will guide you in filling-in the houselist:

On the top of the houselist form, provision is made to note the name of Khet / Krong with Code No.; name of Srok/Khand with Code No.; name of Khum/Sangkat with Code No.; name of Phum/Mondol with Code No.; and Enumeration Area No. Alternate names of administrative units like Khet/Krong, Srok/Khand are given for convenience. The names of the unit not applicable may be scored out. For example, if your EA is in Krong and not in Khet score out Khet etc. These entries which will be referred to as "Identification Particulars" hereafter are to be filled in by you very carefully. This is the method by which every village in any Khum/Sangkat in every Srok/Khand of the Khet/Krong is identified by a combination of numbers. For this purpose every such unit would have been allotted code numbers. Your supervisor would have indicated to you the code numbers. You will have to enter these numbers in the relevant spaces against the names of the various jurisdictional units. It will be advisable to fill-in the Identification Particulars in the blank forms before your commence houselisting as it will save time during your rounds.

Column 1: Line Number

31. Every line in the Houselist is to be numbered by you serially. The line numbers will be continuous for your EA. For your convenience, serial numbers 1, 2, 3, 4, ... 9 and 0 have already been printed in this column. The last line number may be made 10, by writing 1 before 0 in the first page. In the second page, you can convert number 1 into 11 by writing 1 before 1; number 2 can be made 12 and so on. The last number can be made 20. This procedure can be continued till the end of EA.

Column 2: Building / Structure Number

32. The number which has been assigned in the EA map and which has been painted (or marked on a sticker) by you on the building which contains one or more households, should be entered in this column without the letter C (e.g. 001, 002 etc.).

Columns 3 to 5: Predominant Construction Material of Building/ Structure

33. This question has been divided into three parts: (a) material of wall; (b) material of roof; and (c) material of floor. For your convenience the description of the predominant construction material has been indicated on the houselist itself under each item, i.e., wall, roof and floor. A numerical code for a group of materials has been indicated. What you should do is to enquire about the materials of construction of building and enter the

appropriate code in Columns 3 to 5 for each of the materials of wall, roof and floor respectively. You may be also able to see these materials.

Column 3: Material of Wall

- 34. For material of wall, eight codes have been provided which are indicated in the schedule itself. In order to determine the material of wall you have to take into account the material out of which the major portions of the walls of the building are made and then select the appropriate code. The code thus selected should be entered in Column 3. Dash (–) will be entered in the case of a structure with pillars and without walls, since question of wall does not arise in such a case. This can be explained in the Remarks column.
- 34.1 In case material of wall is other than those listed with codes 1 to 7, write 8 and give the name of material in Column 3 itself or in Remarks column.

Column 4: Material of Roof

35. For material of roof of the building, eight codes have been provided. These are indicated in the schedule itself. If two or more kinds of materials are used for roof, the material that is mostly used may be taken as the roof material. After ascertaining the material of the roof you have to give the suitable numerical code in Column 4. In case material of roof is other than those listed with Codes 1 to 7, write 8 and give the name of material in Column 4 itself or in Remarks column.

Column 5: Material of Floor

- 36. For material of floor, seven codes have been provided as indicated in the schedule itself. For the material of floor you have again to take the major portion of material out of which the floor of the building is made. For example, if in a building only the drawing room has ceramic tiles floor while all other rooms and corridors have just cement flooring, the material of floor to be recorded here will be "cement", i.e. Code 3. If a building has tiled floor in the bathroom and all other rooms have cement floor the material of floor will again be "cement".
- 36.1 It is emphasised that while recording the materials of wall, roof and floor, you have only to give the code number in the columns provided for this purpose and not description, except for other (specify).

Column 6: Purpose of Building / Structure

37. If a building is used wholly for residential purpose, give Code 1 in this column. If it is used as a residence as well as a shop, give Code 2. If it is used as a residence and workshop (or a household industry like weaving, pottery etc.), give Code 3. If it is used as a residence and any other

establishment, give code 4 and specify that establishment. Examples of code 4 are residence and school, residence and office, residence and bank, residence and pagoda etc. In these cases write 4. school; 4. office; 4. bank; 4. pagoda etc.

Important Note

38. If a building is found wholly vacant, i.e. if nobody is living in it at the time of houselisting and it is not used for any other purpose, it should also be marked on the EA map and numbered. In this case, write the word "Vacant" above the box marked on the EA map for this building. In Form A, Columns 1, 2 and 13 only may be filled-in for a vacant building leaving the other columns blank. In Column 1, line number may be entered and in Column 2 building number may be written for the vacant building. In the Remarks column (Column 13), the word "vacant" should be written. If a residential or partly residential building is found locked because the household members have gone on travel, then it should not be treated as "vacant". In this case also, Columns 1, 2 and 13 only may be filled-in and other columns may be left blank. The fact that the occupants have gone on a "Remarks" travel should be noted in the column as locked-occupants travelling".

Column 7: Household No.

- 39. As already defined, a "household" is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. It may be made up of related or un-related persons or of mixed type. A cook or a servant living in the house of his employer and taking his food there, is part of that household. A hostel where a number of unrelated persons live together is an institutional household provided it has a common kitchen. So also is a jail.
- 40. There should be a household number in Column 7 since you have noted in column 6 that the building is wholly or partly residential.
- 41. There may be more than one household in a building as already pointed out. Each household in one building should be given a separate number (01, 02, etc.). You will get an idea of the numbering of the buildings and households located in them from the following:

	Particulars	Building / structure Number	Household Number	
1	Building No. 009 having one household	009	01	
2	Building No. 009 having two households	009	$\begin{array}{c} 01 \\ 02 \end{array}$	
3	Building No. 009 having three households	009	01 02 03	

If a building contains more than one household, the building number should not be repeated in Column 2 on the subsequent lines (please see example above). Also, the predominant construction materials of building (Columns 3 to 5) and purpose of building (Column 6) need not be filled-in on subsequent lines once these particulars have been entered against the first household of the building.

Columns 8 and 9: Particulars of Head of Household

42. Columns 8 and 9 are required to be filled in, only in respect of the head of household. You have to write the name and sex of the head of household.

Definition of Head of Household

43. The head of household for census purposes is a person who is recognised as such in the household. He or she is generally the person who bears the chief responsibility for the management of the household and takes decisions on behalf of the household. The head of the household need not necessarily be the eldest male member, but may be a female member or a younger member of either sex. You need not enter into any long argument about it but record the name of the person who is recognised by the household as its head. In the case of an absentee *de jure* "Head", the person on whom the responsibility of the managing the affairs of the household falls at the time of houselisting, should be regarded as the Head.

Column 8: Name

44. The name of the head of each household should be written in this column. In the case of Institutional households, such as hostels, residential hotels, jails, pagodas etc., where the head of institutional household can be recognised by designation, such as, hostel warden, jailer, chief monk,

manager etc., you may enter this designation in this column after writing the name of the Institution. If there is no such designation, write the name of the recognised head of Institution.

45. In the case of institutional households, please write "I" within brackets after the name or designation of the head in this column. Example: Kolab II School Hostel, Manager (I); Mr Srey Rotha (I). Please also write "Institutional Household" in the Remarks column.

Column 9: Sex (1: Male, 2: Female)

46. If the head of the household is a male write 1. If female, write 2 in this column. For eunuchs and hermaphrodites, you may write 1 in the column.

Columns 10 to 12: Number of Persons Usually Living in the Household

- 47. Enter the number of males usually residing in the household in Column 10, number of females in Column 11 and total number of persons in Column 12 (total of Columns 10 and 11). Please note that the purpose of ascertaining these figures is to have a preliminary idea of the usual residents in the household. Casual visitors should be excluded as they will be considered at their respective places of normal residence. Persons like household helper, visitor or guest living and having their meals with the family are also considered as usual members of the household if they have been living with the household for six months or more, or if they have no other place of residence. Usual residents absent for six months or more should be excluded from the household in which they usually reside.
- 47.1 After entering the figures in these three columns, you must arithmetically check whether number of males in Column 10 plus number of females in Column 11 is equal to number of persons in Column 12.

Column 13: Remarks

48. This will provide space for any useful information about the building, or household. As already mentioned in the Instructions for filling in Column 8, write "Institutional Household" in case of such household. If the building is vacant, write vacant here as already mentioned. If the building is locked and the occupants have travelled, you may record this in the Remarks column as already stated. This space may be also suitably used to explain Code 8 in Columns 3 and 4 or Code 7 in Column 5, if necessary.

General

49. Each page of the houselist of the EA should be numbered continuously as 1, 2, 3, etc. The page number should be given in the place allotted on the right hand top corner of the houselist. On every page of the

houselist for EA, the total number of pages used for EA should be given in the space provided on the right hand top corner.

- 50. The total number of households in Column 7 of the houselist should be counted and written in the box for total under this column in each page. The figures of males, females and persons in Columns 10, 11 and 12 may be totalled and given for each page. In a separate sheet called Houselist Summary (Census Form 1), specimen of which is given in Appendix IV you have to copy totals of each of these columns from each page and strike the grand totals for EA.
- 50.1 It is important to check whether the figures entered in the Houselist Summary are arithmetically correct. The sum of number of males in Column 3 and the number of females in Column 4 should be equal to the number of persons in Column 5. This should be checked for every line and Total line of Houselist Summary.
- 51. The enumerator should write his/her name and sign all the pages of the houselist and also record the date in the space provided.

CHAPTER - 3

Filling-in of Form B Household Questionnaire

General

52. Form B Household Questionnaire (Appendix II) will be canvassed in all households in your EA. You must take Form A along with you and identify each household and do the enumeration in Form B.

Reference Time is 00:00 hours of March 3, 2008

53. The reference time for the 2008 Census is 00:00 hours of Monday, March 3, 2008. This means that the 2008 Census is expected to provide a snap shot of the population in the households in the EA as it exists at 00:00 hours of March 3, 2008. In other words, the population count relates to this reference time. As you will agree, it is not possible to ascertain the particulars of every individual at this fixed point of time. Therefore, the enumeration is spread over eleven days beginning on March 3, 2008 and ending on March 13, 2008. During these days, information is collected of persons present in households at 00:00 hours of March 3, 2008 (Census Night). Hence the entire enumeration relates to this reference time. Note that only persons alive in household at 00:00 hours of this day should be enumerated. Remember that all questions you ask must relate to Census Night unless you have specific instructions otherwise in this manual (e.g. questions on economic characteristics). Please also note that for Houselisting no such reference time is fixed since it is only a general preliminary inquiry. But for the Census (when Form B Household Questionnaire will be canvassed), a reference time is fixed, since census is expected to provide the population figures as at that time.

Important Note

- 54. Form B will be filled-in for all households in your EA. All households include normal or regular households, institutional households, homeless households, boat population and transient population. Form A will help you in identifying each normal or institutional household. Please note that persons belonging to diplomatic corps will not be included in the census count.
- 54.1 You may come across one or more new households which were not included in Form A, either in buildings listed in Form A during houselisting or in buildings not noticed during houselisting and hence not listed in Form A. In each of these situations, you should enumerate the new households for filling-in Form B Household Questionnaire. Remember here the basic principle of the census that all persons present in all households in your EA on Census Night should be enumerated without omission or duplication.

- 54.2 Before enumerating each of the new households as mentioned in the previous paragraph, you should up-date Form A Houselist. This may be done by including building number, household number and other particulars of these cases under the heading "Additional Households noticed during Enumeration" at the end of Form A without disturbing the existing line numbers. This is illustrated in Appendix V.
- 54.3 A building which was locked during houselisting may not be locked during the census enumeration. You have to enumerate the household in this building. You may up-date Form A in this case as follows: If there is only one household in such a building you may fill in Columns 3 to 12 on the line on which the building number is already entered. Columns 1 to 2 and 13 should have been filled-in for this building in Form A during houselisting. If there are more than one household in that building, you may fill in particulars of second, third etc., household at the end of Form A. You may cancel the words "Building locked—occupants travelling" originally recorded in the Remarks column (Column 13) against this building number.
- 54.4 A building which was vacant during houselisting may not be vacant during the census enumeration. You have to enumerate the household in this building. You may up-date Form A in this case as follows: If there is only one household in such a building you may fill in Columns 3 to 12 on the line on which the building number is already entered. Columns 1 to 2 and 13 should have been filled-in for this building in Form A during houselisting. If there are more than one household in that building, you may fill in particulars of second, third etc., household at the end of Form A. You may cancel the words "vacant" originally recorded in the Remarks column (Column 13) against this building number.
- 54.5 The page total of Form A and Houselist Summary entries need not be corrected consequent on listing additional households in Form A during the enumeration stage in situations explained in Paragraphs 54.2 to 54.4.
- 54.6 Instructions for the enumeration of normal households are given in this Chapter hereinafter. Instructions for enumeration of Institutional Households are given in Chapter 4. Instructions for enumeration of homeless households, boat population and transient population are given in Chapter 5.
- 54.7 It is possible that between Census Night and the time of enumeration the composition of population in some households may have changed. If somebody had died after 00:00 hours of March 3, 2008, include him or her in the count as that person was living in that household at that point of time. If a baby was born after 00:00 hours of March 3, 2007, you should not enumerate the baby who did not exist at 00:00 hours of March 3, 2008. Visitors are enumerated in a normal or regular household only if they spent Census Night in that household.

Specimen Form of Questionnaire

55. Specimen of Form B Household Questionnaire is given as Appendix II. This form should be used to enumerate individuals in households in your EA. This will be done in a second round starting from March 3, 2008.

<u>Instructions for filling-in Form B Household Questionnaire Part I:</u> <u>Identification and Population Particulars</u>

Identification Particulars

56. Fill in name and code of Khet/Krong, Srok/Khand, Khum/Sangkat and Phum/ Mondol as you have already done for Form A Houselist. Enumeration Area Number also will be filled in the same way. Copy from Form A, the Building No. and Household No. on the top of the form. It will be advisable to fill-in the Identification Particulars (except Building No., Household No. and Name of Head of Household) in the blank forms before your commence enumeration as it will save time during your rounds.

Type of Household / Population

57. Give suitable code in the box provided for this purpose. For a normal household, give Code 1.

What to do when two or more Questionnaires are used for a Household?

- 58. There is a provision on each questionnaire to enumerate 10 persons. If you have to enumerate more than 10 persons in a household, continue enumeration on a new questionnaire. This new questionnaire is in continuation of the first one and must be treated as such. Remember that whenever you use more than one questionnaire for any household, you must write Household No. ... (Continued) on the right hand top of the first page of second and subsequent questionnaires. You should fill in Identification Particulars in continuation questionnaires also. You should write in the square provided at left hand bottom of the first page (Part 1) of the first questionnaire, the total number of the questionnaires used for the household. You must clip or pin together all questionnaires of the household concerned.
- 58.1 Serial numbers are printed in Column 1 of Statement 1.1 and Statement 1.2 of Part 1 and Column 1 of Part 2, like 1, 2, 3 ... 0. The last serial number in the first page may be made 10 by writing 1 before 0 for the tenth person. In the next continuation questionnaire, you may continue numbering by putting the digit 1 before the numbers already printed on the second questionnaire to form 11, 12, 13 etc., and for the last one you have to

put 2 before 0 to make it 20. When you use a third questionnaire, you should put 2 before the existing numbers to form 21, 22, 23 and so on.

Name of Head of Household

59. Head of Household has already been defined. You may find his/her name against Household No. concerned in column 8 of Form A: Houselist. You should record that here. If there is a change in the name of head of household between houselisting and now, record the new name.

Filling in of Statements 1.1, 1.2 and 1.3

- 60. For filling in these statements, please carefully read the following instructions: Usual members may be divided into two categories: (i) those who slept in the house occupied by the household on Census Night i.e. those who were present on Census Night and (ii) those who were away and so were absent on Census Night. Please note that persons on night duty (e.g. doctors, nurses, policemen, watchmen, prison wardens etc.) who would have normally slept in the house but for going on night duty should be treated as usual members present in household on Census Night.
- 61. Visitors (i.e. guests of any member of household) who slept in the house on Census Night are called visitors to household present on Census Night.
- 62. In Statements 1.1, 1.2 and 1.3 of Form B Part I, you have to fill in some particulars of usual members of household present on Census Night, visitors to household present on Census Night and usual members of household absent on Census Night respectively.

Important Note

63. You may use the number of persons usually living in the household recorded in Columns 10, 11 and 12 of the Houselist for guidance. But please remember that those figures related to all usual members of the household in general. You have to contact the head of the household or any responsible member of the household and obtain information for filling in the schedule as per instructions contained in the following pages. You should arrange the timing of your visit to households in your EA in such a way that you would be able to meet the head of household or any responsible member of each household. Sometimes you may find that all the members of a household had gone out for a few hours for shopping, work, study etc. leaving the building locked. In such cases you should leave a message for the household concerned that you will again visit the household for census enumeration (giving time and date) and requesting them to be present at that time. For this purpose you may use Call Back Cards (Appendix VII).

Statement 1.1 Usual Members Present on Census Night

- 64. In this statement you should list out all usual members of household present on Census Night. You should write down first the name of the head of household (refer definition given earlier in paragraph 43 Chapter 2). If the head of the household was absent during the reference night, find out who was responsible for the household in the absence of head of household and record his or her name, provided this person slept in the household on Census Night.
- 65. In entering the names in Statement 1.1 it would be better if some system is followed. After entering the name and other particulars of the head of household, you should cover the near relations such as wife or husband of the head of household, sons and daughters, each son's wife and children, each daughter's husband and children, then other relations such as brothers, sisters, mother, father, etc., of the head of the household, then domestic servants, if any etc. Such a system of listing and entering of particulars will ensure that omissions are avoided, particularly of small children. It will also help in cross-checking replies regarding age.
- 66. A word of caution: You must ask probing questions regarding relations such as unmarried sisters, parents, domestic servants and children. Otherwise, the head of the household may not indicate that there are such persons as usual members of the household present on the Census Night. Please make repeated enquiries about infants and very young children because they are often liable to be left out of the count.

Column 1: Serial Number

67. Serial Number has to be given for each person using the numbers already printed.

Column 2: Full Name

68. This question hardly calls for any explanation. The names of persons starting with the head of household should be entered here. The names you put down should be such that if a second visit is paid to the house during or after the final enumeration, the persons to whom the names refer can be easily identified.

Babies who have not been named

68.1 Occasionally you will come across babies who were born before Census Night but who haven't been named by the time you call to enumerate. In such cases write down "Baby" before the family name. For example, if the newly born baby's father's name is Savongz you should put down Baby Savongz.

Persons with identical names

68.2 You may also come across households where two or more persons are known by same family name (e.g. Meas). In such cases you must record also the names by which they are distinguished in the household and by neighbours and friends (e.g. Meas Savongz and Meas Savath).

Column 3: Relationship to Head of Household

69. In this column you will have to record the relationship to head of household in full in words. The first person to be recorded is the head of household. In the case of the head write 'head'. For others write the full relationship. Do not use words like 'nephew', 'niece', 'uncle' or 'aunt', but state whether brother's or sister's son or daughter (for nephew or niece) or father's or mother's brother (for uncle), or father's or mother's sister (for aunt). Son or daughter will include adopted son or adopted daughter or step son / daughter. For brother-in-law, write wife's brother or sister's husband as the case may be. For grandson, write son's son or daughter's son as the case may be. In the case of boarders or domestic servants / cooks, etc., who are enumerated as members of the household though unrelated, write boarder or domestic servant/cook, as the case may be.

Column 4: Sex

70. Record the code 1 for male and 2 for female. It is important to ask the sex of the persons when information is being given to you by a third person. Bear in mind that some names can be misleading in this respect. For example, Vichet or Socheat can be used for a male as well as a female. For eunuchs and hermaphrodites write 1.

Statement 1.2: Visitors Present on Census Night

71. You have to record in Statement 1.2 of Form B Part 1, the full name, relationship to head of household and sex of every visitor who was present in the household on Census Night. Follow the instructions mentioned above for filling Columns 1 to 4. You are also required to write in Columns 5 or 6, the usual residence of the visitor. If the usual residence of the visitor is within Cambodia write the name of district to which that place belongs with name of province within brackets in Column 5 and put a dash (–) in Column 6. If the visitor usually resides in another country put a dash (–) in Column 5 and write the name of that country in Column 6. If no visitor was present in the household on Census Night, score out neatly Statement 1.2.

Statement 1.3: Usual Members Absent on Census Night

- 72. The entries in Statement 1.3 are restricted to usual members of the household who were absent from the house on census night. Note that only five lines have been provided in this column. If there are more than five persons to be entered here, you must use a continuation questionnaire and suitably enter the serial numbers.
- 72.1 In statement 1.3 you should, in addition to full name, relationship to head of household and sex, record age, location on census night and the duration of absence of every usual member of the household who was absent on Census Night. For filling in the name, sex and relationship to head or temporary head, follow the instructions mentioned above. For filling the age, follow the instructions given for filling Column 5: Age, of Form B Household Questionnaire Part 2: Individual Particulars (paragraphs 84, 84.1 and 84.2 in this Chapter).
- 72.2 The "Location on Census Night" (Column 6 or 7) refers to the place where the absentee usual member spent census night. If the location or place where absentee usual member of the household was residing on Census Night was within Cambodia give name of the district to which that place belongs with name of province within brackets in Column 6.. If it is another country, write only the name of the country in Column 7. If these details are not known, write "Not Known" under Column 6 or 7.
- 72.3 In Column 8, you are expected to write in completed months how long he/she was absent up to Census Night. For example, if the person has been away for two months three weeks, write 2 in the space provided. If he/she was absent for less than one month, write down 0.
- 72.4 If the usual head of household was absent on Census Night his or her name should be entered on the first line in Statement 1.3. Remember, however, to indicate in the relationship column the relationship of this person to the temporary head entered in Statement 1.1. Thus, you should never enter Head in relationship column in Statement 1.3, but specify whether this absent person is the husband, father, brother, mother, etc., of the temporary head. If no usual member of household was absent on Census Night, score out neatly Statement 1.3.

Total Number of Persons in Statements 1.1 and 1.2

73. On the right-hand side of Statement 1.3, are boxes in which you should put down the total number of persons (male plus female) in Statements 1.1 and 1.2. If there is no entry in Statement 1.2, record "0" in the box for "Total Number of Persons in Statement 1.2". As regards, total number of persons in Statement 1.3, you need not do anything. It may be used later in office

Total of Statement 1.1 and Statement 1.2

- 74. One box has been provided for recording the total number of persons in Statement 1.1 and Statement 1.2. You are expected to add the number of persons in Statement 1.1 and Statement 1.2 and put the total in the box concerned.
- 75. If you use more than one questionnaire for a household you should add up the number of persons listed under Statement 1.1 and Statement 1.2 on each questionnaire and put the total in the appropriate boxes of the first questionnaire for the household. The boxes on the second and subsequent questionnaires should be left blank.
- 76. You have to give your name, signature and date at the appropriate place.

<u>Instructions for Filling-in Form B Household Questionnaire Part 2:</u> Individual Particulars

The Layout of Form B Household Questionnaire Part 2

- 77. This part of the questionnaire is divided into columns and rows. There are columns numbered 1,2,3....23. Each column refers specifically to a questionnaire item which is clearly stated at the head of the column.
- 77.1 There are ten lines. Each line is reserved for one person. This means that if you are writing down the particulars of one person, you must use one line only starting from the left and moving along the line to the right.
- 77.2 Remember that you have to fill in Part 2 only for usual members and visitors (i.e. persons listed in Statement 1.1 and Statement 1.2 of Part 1) who were present in the household on Census Night. Do not include here usual members who were absent on Census Night (i.e. persons listed in Statement 1.3 of Part 1).

Instructions for Filling-in Columns 1 to 23 of Form B: Part 2

78. You have to collect information in Part 2 for all persons mentioned in Statement 1.1 and Statement 1.2 of Part 1. Some of the following questions have been answered in Part 1. Therefore there will be no need to ask these questions again. In such cases all you have to do is to copy the information in the appropriate columns.

Column 1: Serial No.

79. Serial Number has to be given for each line (i.e. for each person in the household starting from the head of household). For your convenience the serial numbers have been printed in this column which you may use suitably. Please check that the last serial number given is equal to the total

number of persons in Statements 1.1 and 1.2 given in the thick square at right hand bottom on the first page (Part 1).

Columns 2 to 4:

80. The information in these columns should be first entered from Statements 1.1 and 1.2 of Part 1 before proceeding further to fill in other columns for each person.

Column 2: Full Name

81. Write in spaces provided the names of all respondents in the household (as in Statement 1.1 and Statement 1.2). First, names in Statement 1.1 in that order may be copied. This may be followed by names in Statement 1.2 in that order.

Column 3: Relationship

82. Based on the information already collected in Column 3 of Statements 1.1 and 1.2 give code for relationship to head of household, for each person. Codes for relationship are provided on the questionnaire itself below Column 3. Read the relationship and select the proper Code. Note that Code 1 is for head of household. Always head of household will be the first person enumerated in the household. Code 2 should be given to wife of male head of household or to husband of female head of household. Code 3 should be given to son or daughter of head of household. Code 4 should be given to father or mother of head of household. Code 5 should be given to grand son or grand daughter of head of household. All other relatives of head of household should be given Code 6. You should take sufficient care to avoid wrong coding of relationship to head of household. For example, sister's son should not be coded as son (Code 3) because the word son is there. The correct Code in this case is 6. Non-relatives of head of household should be given Code 7.

Column 4: Sex

83. This column may be filled in by copying the information from Column 4 of Statements 1.1 and 1.2 for the persons concerned.

Column 5: Age

- 84. The age of every person must be stated in completed years only, as on March 3, 2008. For those who know their birthdays, the age to be recorded is the age as at last birthday. "Age in completed years only" means that all the ages must be recorded in full years discarding fractions of years and months.
- 84.1 For instance, 15 years 11 months should be written down as 15. Do not write down months. Only years are required. The age of all infants who are less than one year old should be recorded as "00". In this connection you are requested to make sure that infants of the household even if one day or

less than one day old as on Census Night are invariably enumerated. It is again pointed out that you should take all precautions to enumerate children (less than age 14) and infants (less than 1 year). Unless you ask probing questions they are likely to be omitted. This is a very important instruction that you should bear in mind always. Most of the households have the Household Book. The date of birth of each person enumerated may be obtained from it. However date of birth has to be got confirmed by the respondent before using it to calculate his/her age.

84.2 What to do when a person does not know his/her age?

For such a person use any of the following methods to estimate his/her age:-

- (1) You may ask him/her to state the year of birth according to animal calendar. Based on the information furnished and using the conversion table given to you, record the age in completed years.
- (2) (i) Ask him/her to name any historical event (preferably a local one) which he/she has been told as having occurred around the time of his/her birth. You may be given a list of historical events for this purpose and you may suggest a suitable event from this list also.
- (ii) Ask him / her to give you an indication of how old he/she was when that historical event occurred.
- (iii) Then use this information to work out his/her age. For example, if a respondent tells you that he/she was about 20 years old when Cambodia attained Independence, his or her age may be about 20 + 54 (November 9, 1953 to March 3, 2008) = 74 years.
- (3) Sometimes the age can be ascertained with reference to the age of another person of a known age, who may be living in the same household or in the neighbouring household or that of a well-known person of the village such as the village chief.
- (4) Only as a last resort you should estimate a person's age from his/her physical features. If you are obtaining information about an absent person from a third person then obviously you have to rely on the information supplied by the third person in estimating the age in respect of the person who is absent. You should not leave this column blank under any circumstances.

Column 6: Marital Status

85. Codes are provided in the column heading itself. You have to ask this delicate question carefully and record the appropriate code numbers according to the answers given. Record Code 1 for Never Married i.e. for those who have never entered into any form of marital union. Record Code 2

for Married (i.e. currently married), 3 for widowed, 4 for divorced and 5 for separated.

86. The category "Married" will include those persons who are contractually married but not yet living as a man and wife. Even if a marriage is disputed in the neighbourhood write Code 2 if the person concerned says he or she is married and is in stable *de facto* union The category separated will include both legal and *de facto* separations. Persons who were widowed or divorced but have remarried must be recorded as married.

Column 7: Mother Tongue

- 87. Mother tongue of a person is the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In case of infants and deaf mutes, the language usually spoken by the mother should be recorded. In case of doubts, the language mainly spoken in the household may be recorded.
- 87.1 You have to use the following codes for recording answer to this question:-

Code Mother Tongue

01: Khmer	11: Chaam	21: Cha Ong
02: Vietnamese	12: Kaavaet	22: Kraol
03: Chinese	13: Klueng	23: Radaer
04: Laos	14: Kuoy	24: Lmoon
05: Thai	15: Krueng	25: Mel
06: French	16: Lun	26: Khogn
07: English	17: Phnong	27: Por
08: Korean	18: Proav	28: Suay
		29: Any other mother tongue which has to be
09: Japanese	19: Tumpoon	specified
10: Chaaraay	20: Stieng	

Record the code in blank space and not in the shaded boxes.

- 87.2 Please note in this connection the instructions given below:- You should tell the respondent that the information required here is mother tongue and not any other language spoken. It should also be made clear that this information is required purely for statistical purposes only.
- (i) However, you are bound to record the language as returned by the person as his / her mother tongue and you should not enter into any argument with him / her and try to record any language other than what is returned.
- (ii) If you have reasons to suspect that in your area mother tongue is not being truthfully returned, you should record the mother tongue returned through code and make a report to your supervisor for verification.

(iii) It is possible that mother tongue may be different for different persons in a household. It is, therefore, necessary to ask every person about his / her mother tongue.

Column 8: Religion

88. Record the appropriate code number for the religion to which the respondent says he belongs. There is no need to verify this. You must accept whatever answer is given. For those claiming to belong to religions that fall under other categories, record Code 4 and specify the reported religion e.g. 4 Hindu. For a person who says that he/ she has no religion, write 4 No religion.

Column 9: Birth Place

- 89. If a person reports to have been born in this village, record Code 1 in the blank space (not in shaded boxes which are reserved for coding in office). Persons reporting to have been born in this village are those born in the same village in which you are conducting your enumeration. The birth place of a person is the place of usual residence of the person's mother at the time of birth. For example, for a person born in (a) a hospital or maternity home outside the usual place of residence of the mother or (b) mother's village or (c) some other place where the mother had gone for a short visit, the birthplace of this person will be the place in which the mother normally lives and not the place of the hospital, the mother's village or place of visit. If however, the mother's length of stay outside her place of usual residence was six months or more or the mother had the intention of staying in the new place for six months or more the "actual place of physical birth" will be considered as the birthplace of the person in question. For example, suppose Bossadine who normally resides with her husband in Bak Kheng went to Kandal Koh to deliver her child in her mother's house, and returned within six months, the birthplace of the child will be Bak Kheng and not Kandal Koh.
- 89.1 If however, Bossadine stays in Kandal Koh for six months or more, then the birthplace of her child will be Kandal Koh and not Bak Kheng.
- 89.2 For those persons reporting to have been born outside the village in which you are conducting your enumeration, record name of the district in which the village of birth falls and also write name of province of that district within brackets. For those born outside Cambodia write name of the country of birth.

Column 10: Previous Residence

90. In the blank space (not shaded boxes), record 1 if the respondent lived in the village where enumeration is being conducted continuously since birth (except for shifting to another place outside the village of enumeration for purely temporary stay) and skip to Column 13. If a person was usually residing in another village immediately before he/she came to the present

village where he/she is enumerated, the earlier village is the person's previous residence. If the person had lived earlier in more than one village, the immediate previous residence of the person is what we are interested in. For example, a person enumerated in village A had lived earlier in village B and before that in village C, his/her previous residence is village B and not village C. Write name of district of previous residence and also write name of province of that district within brackets. If respondent is reported to have resided outside Cambodia, write the name of the country. It is important to note that even if a person was born at the place of enumeration but had shifted subsequently to another village for work or for studies and had come back again to place of enumeration, he/she should be considered as having had another place of residence prior to his/her enumeration here.

Column 11: Duration of Stay

- 91. The question on duration of stay refers to duration of stay in village of enumeration since coming from last previous residence. This question "how long have you lived in this village?" is to be administered only if answer in Column 10 is that the place of last residence was another village in Cambodia or in a country outside Cambodia. In other words, the answer in Column 10 is not Code 1. Duration of stay should be recorded in Column 11 using the codes for column 11 given on the questionnaire itself. If answer in Column 10 is Code 1, put a dash (–) in Column 11.
- 91.1 If a person is reported to have resided in a village (since coming from last previous residence) for less than 1 year, record 00; if from 1 year to less than 2 years, record 01; if from 2 years to less than 3 years record 02 and so on. For 98 years and over, record 98 only.

Column 12: Reason for Migration

92. "Migration", means moving to the place where you are enumerating from another village (or another country) which was the last previous residence. For persons to whom you have given code other than 1 in Column 10 and for whom you have entered duration of stay code in column 11, you have to record reason for migration by giving one of the codes applicable to the person concerned from the list of codes for Column 12 given below the column. For a person to whom you have given Code 1 in Column 10, put a dash (-) in Column 12. The reasons given are simple and easily understandable. Code 05 (Family Moved) needs an explanation. If a member of a family had to move to the place of enumeration from a previous residence because the entire family moved, this code has to be given. For example, if Ratha migrated because his place of work is transferred give Code 01 for him. For his wife and children who had to also move with him the reason for migration is family moved (05) and not Transfer of work place (01). However, if his wife or son or daughter gives a separate reason for moving to this place like "in search of employment" or "education" you have to assign the appropriate code to him/her. Give Code 09 (Repatriation or Return after displacement) to a person who was repatriated by an official agency or to a person who returned to his/her village after having left earlier due to internal disturbances or political reasons. Children who are orphans after their parents' death may be adopted by somebody or may be taken care of by some relatives. This may result in the orphaned children moving from one place to another. In such cases give code 10. For any reason of migration other than the first eleven listed, give 12 and write down the reason in the column itself. Please note that Code 12 should be given only if the reason for migration is not covered by any of the codes 01 to 11. For instance, if a person had been repatriated, you must give Code 09 in his/her case and *not* write "12 (repatriated)".

Column 13: Literacy

93. The definition of literacy is the ability to read and write with understanding in any language. A person is a literate when he/she can both read and write a simple message in any language or dialect. A person who cannot both read and write a simple message is considered illiterate. Also to be considered as illiterate is that person who is capable of reading only his/her own name or numbers, as well as persons who can read but not write, or vice versa

For the present census all children of the age of 6 years or less (i.e. completed age 0,1,2,3,4,5 and 6) should be treated as illiterate even if the child is going to a school and may have picked up reading and writing a few odd words in a language.

93.1 A person who knows how to read and write but at the time of the census he/she can no longer read and write due to some physical defects or illness is still considered literate. An example of this is an aged person who knows how to read and write but can no longer perform these activities due to poor eyesight. Disabled persons who can read and write through any means such as Braille system for the blind, are considered literate.

93.2 Having described the concept of literacy, following instructions are given for filling-in Cols. 13(a) and 13(b). For children aged 6 or less enter Code 2 in Col. 13(a) and Code 1 in Col. 13(b).

Column 13(a): Literacy in Khmer Language

93.3 The person aged 7 and above may be asked whether he/she can read and write with understanding in Khmer language. If the answer is Yes, record 1 in Col. 13(a). If it is No, record 2 in that column. If you are not sure whether the person can read and write, you may show the person the census instruction manual and ask him to read a line or ask him to write a simple sentence in Khmer.

Column 13(b) Literacy in another language

- 93.4 The person who said Yes in Col. 13(a) may be asked whether he/she can read and write with understanding in any other language i.e. whether he/she is literate in one more language (other than Khmer).
- 93.5 If he/she says "No", record Code 1 for him/her in Col.13 (b). If he/she tells the name of a language give the code of that language in col. 13(b) from the list given under the column. If it is any language other than the six languages with codes, give Code 8 and specify that language.
- 93.6. The person who said "No" (Code 2) for Col. 13(a) may be asked to tell the language in which he/she can read and write with understanding. If he/she says again "No" give code 1 for him/her in Col. 13(b). If he/she tells the name of the language in which he/she can read and write with understanding, give the code of that language in Col. 13 (b) for him/her according to the same list of codes. If it is any language other than the six codes, enter Code 8 and specify that language.
- 93.7 In both the cases mentioned above if the respondent is literate in more than one language, only one language has to be recorded that being the best of the languages in which he is literate.

Column 14: Full Time Education

94. Full-time education refers to education in an educational institution like Primary School, Secondary School, College etc.

Column 14 (a): Has the person attended School / Educational Institution?

- 95. Please note that this question applies to both literate and illiterate persons i.e. irrespective of answers in Col.13 (a) and (b). This also applies to children aged 6 and below. The answer to this question may be recorded as follows:-
- (a) Never:- Record 1 if the person has never at any time received full-time education.
- (b) Now:- Record 2 if the person is still receiving full-time education at the time of the Census.
- (c) Past:- Record 3 if the person received full-time education in the past and is no longer receiving it.

Note that it is possible that a person who is literate (Code 1 in Col. 13 (a)), or Code 2 in Col.13 (a) with one of the Codes 2 to 8 in Col.13 (b)), had never attended any school or educational institution at all and therefore, has to be given Code 1 in Column 14(a).

Column 14 (b): What is the Highest Grade Completed?

96. Enter dash (-) in the two sub Columns in the case of a person who has never attended school/educational institution (Code 1 in Column 14(a)). Categories of educational levels have been provided for recording the highest grade completed in the school, college or any other educational institution attended by the respondents. A last category "other (specify)" (Code 20) has been included to cater for other educational categories not mentioned. In general, you may check whether the educational level of a person is consistent with his/her age. For example, a boy or girl of age 8 could not have completed class 11. If any such inconsistency is noted, please make probing questions and ascertain the correct answer.

Column 15: Physical/Mental Disability, if any

97. This question is a sensitive one and should be canvassed without offending the feelings of the respondent. The purpose of this question is to elicit the information whether the respondent has any physical/mental disability. If he/she has no such disability put (0) in the two sub columns. The five types of disabilities identified for census purpose are given below: 97.1 In Seeing: A person who cannot see at all (has no perception of light) or has blurred vision even with the help of glasses or contact lens will be considered as having disability in "Seeing" or visually disabled and code '1' will be entered under this question. A person with proper vision only in one eye will also be treated as visually disabled. You may come across a situation where a person may have blurred vision and had no occasion to test whether her / his eye-sight would improve by using spectacles. Such persons would be treated as visually disabled.

97.2 In Speech: A person will be recorded as having speech disability, if she / he is dumb. Similarly a person whose speech is not understood by a listener of normal comprehension and hearing, she / he will be treated as having speech disability and code '2' will be entered. Persons who stammer but whose speech is comprehensible will not be classified as disabled by speech.

97.3 In Hearing: A person who cannot hear at all (deaf) or can hear only loud sounds will be considered as having hearing disability and in such cases code '3' be entered. A person who is able to hear, using hearing - aid will not be considered as disabled under this category. If a person cannot hear through one ear but her/ his other ear is functioning normally, should be considered having hearing disability.

97.4 In Movement: A person who lacks limbs or is unable to use the limbs normally. will be considered having movement disability and code '4' will be entered here. Absence of a part of a limb like a finger or a toe will not be considered as disability. However, absence of all the fingers or toes or a thumb will make a person disabled by movement. If any part of the body is deformed, the person will also be treated as disabled and covered under this category. A person who cannot move herself/himself or without the aid of another person or without the aid of stick, wheel chair etc., will be treated as disabled under this category. Similarly, a person would be

treated as disabled in movement if she / he is unable to move or lift or pick up any small article placed near her/ him. A person who may not be able to move normally because of problems of joints like arthritis and has to invariably limp while moving, will also be considered to have movement disability.

97.5 Mental: A person who lacks comprehension appropriate to her/ his age will be considered as mentally disabled. This would not mean that if a person is not able to comprehend her/ his studies appropriate to her/his age and is failing to quality her / his examination is mentally disabled. Mentally retarded and insane persons would be treated as mentally disabled. A mentally disabled person may generally depend on her / his family members for performing daily routine. It should be left to the respondent to report whether the member of the household is mentally disabled and no tests are required to be applied by you to judge the member's disability.

97.6 If a person is disabled, enter only one of the five disabilities for that person, in codes, as given below:

In Seeing 1
In Speech 2
In Hearing 3
In Movement 4
Mental 5

97.7 Please note that a person may have two or more types of disability but only one of these is to be recorded. In such cases you will have to leave it to the respondent to decide as to the type of disability she/ he wants the member of her/ his household to be classified into. The disability of a person will be decided with reference to the date of enumeration. Persons with temporary disability on the date of enumeration will not be considered as disabled. For example, a person's movement may have been restricted because of some temporary injury and she/ he is likely to return to his normal state after sometime, such a person will not be treated as disabled.

97.8 The code has to be given in column 15 (a) "Since birth" if the person has the disability from his birth. In other words, he/she was born with this disability. If the person got this disability after birth enter the disability code in column 15 (b) "After birth".

Columns 16 to 21 on Economic Characteristics of Population

98. These columns relate to the economic characteristics of population both male and female. Information proposed to be collected on economic characteristics of population includes information on economically active and economically not active population. Economically active population includes those who are employed and unemployed. Economically inactive population includes those who are mainly home makers; full time students; dependents; rent-receivers, retired people and other categories of income recipients; and others who are neither employed nor unemployed and also do not come under any of the inactive categories mentioned. The reference period for this is the one year or 12 months before the census night, that is from 4 March 2007 to 3 March 2008. This is also referred to as last year or last one year in this instruction manual.

Column 16: Main Activity During Last Year.

99. First we want to know what has been the main activity of the person during the one year preceding the Census Night. Main Activity means the activity during 6 months (183 days) or more during the last one year (i.e. for the major part of the last year). Codes have been provided on the schedule itself which are to be used while answering this question.

Employed

99.1 The "employed" comprises all persons who were in the following categories for 6 months (183 days) or more during the last one year:-

- (a) Persons who were in paid employment (e.g. working in public or private organisation etc.).
- (b) Persons who during the reference period performed some work for wages, salary, profit or family gains in cash or kind.
- (c) Persons who did not do any work for pay or profit during the reference period although they had a job to which they could return (e.g. off season workers like farmers or fishermen), those on sick leave or leave without pay, those who could not work due to strike or lockout in the organisation they were working.
- (d) Persons who were self employed (e.g. running a shop by himself or herself, selling eatables, practising as doctors, lawyers etc.).

99.2 Work is defined as any economically productive activity that a person does for pay (in cash or kind, in any establishment, office, market, farm, private house) or for profit; or without pay on family farm or enterprise. Workers (other than those working without pay in a family farm or business) should receive pay or profit in cash or kind for their activity. Unpaid activities which are **not** contributing to the person's family business such as voluntary social work or voluntary community support are not classified as "work" for the purposes of this census. Work may be physical or mental in nature. Work involves not only actual work but also effective supervision and direction of work. It is important to note that it includes unpaid work on farm or family enterprise. You must ask probing questions to ascertain the existence of a job or employment or unpaid work on family farm or enterprise during the last year. Please also do not assume that women are generally home-makers. You have to specifically ask probing

questions of women whether they were working. Please also remember that in rural areas where most men are engaged in cultivation, wives and daughters also participate as unpaid family workers in cultivation. Such women should be treated as working instead of treating them as homemakers or housewives since they attend to domestic duty also. You have to be very careful not to make this mistake. Similarly children who work should be regarded as employed.

99.3 What about men or women engaged in production of goods for own consumption?

Please note that the following activities for own consumption are treated as work:

- (i) Production of primary products for own consumption as growing of food grains or vegetables for own consumption.
- (ii) Collection of water and firewood for own consumption.
- (iii) The processing of primary commodities for own consumption by the producers of these items (such as drying own vegetables for later use).
- (iv) Production of fixed assets for own use (such as building a house or rice paddy dike).
- 99.4 Activities for own consumption other than the above are not treated as work (e.g. cooking one's own food, washing one's own clothes etc.). If a person is employed but at the same time does also attend to household chores or attend school etc., he/she should be treated basically as employed.
- 99.5 If you give code 1 for a person after following the above instructions, you have to fill in Columns 17 to 21 which will be described subsequently. Please note that Col. 22 and Col. 23 have also to be filled in for an employed person (Code 1 in Col. 16). This will be explained separately later.

Unemployed

- 99.6 If a person (man or woman) is not employed you should ask whether he or she was unemployed for six months (or 183 days) or over during the last year. Unemployed refers to those who were without work but were seeking work or available for work.
- 99.7 Please note that homemakers, students and others mainly engaged in non-economic activities during the reference period who satisfy the above criteria of unemployment should be regarded as unemployed and not as home makers, students etc., If a person returns that he / she is unemployed for the major part of the last year according to these criteria, you should ask whether the person was employed any time before he / she became unemployed. If he / she says *Yes*, you have to record Code 2 for the person in Column 16. On the other hand, if the person says that he / she was unemployed and seeking work for the first time and was never employed any time before you should record Code 3 in Column 16. In the case of

unemployed who was employed any time before (Code 2 in Column 16), you have to fill in Columns 17-21 for last employment. In case of Code 3 in Column 16, enter dash (–) in each of the Columns 17 to 21.

Population mainly not employed or unemployed

99.8 The employed and unemployed constitute economically active population. Those who are not mainly employed or unemployed spend most of their time as home makers, students etc. which are not considered as economically active. Use the codes given in the schedule for recording the category of people not economically active for six months (or 183 days) or more during the last year.

99.9 The economically not active categories for most of the time last year are explained below:-

<u>Home Maker</u> is a person who was mostly engaged during the reference period in household duties in his or her home. Give code 4 for this category in Column 16.

<u>Student</u> is a person who was mostly attending school/ educational institution (with Code 2 in Column 14(a)). Give Code 5 for this category in Column 16.

<u>Dependent:</u> This category includes all dependents like infants and children not attending school, persons permanently disabled and hence cannot do any work and persons who cannot work because of illness or old age. Dependents will include able bodied persons who cannot be categorised in any other inactive category and are dependent on others. However if such a person was seeking or available for work he or she should be categorised as unemployed and not as dependent. For people who were dependents give Code 6 in Column 16.

Rent-receiver, retired or other income recipients: A person who had retired from service and for most of the time was doing no other work, i.e. mostly not employed again in some work or not engaged in some other work such as cultivation, business, trade etc. or a person who was for most of the time a rent-receiver or a person living on agricultural or non-agricultural royalty, rent or dividend who was neither employed nor unemployed, or any other person of independent means for securing which he/she did not have to work would come under this category. You should give Code 7 in Column 16 for this category of inactive person.

Other, (specify): This category would include all persons not economically active for most of the time and who might not come under any of the above four categories. For such a person (e.g. beggar) you should give Code 8 and specify (e.g. 8 Beggar) in column 16.

Columns 17 to 21

100. Information in these Columns should be filled-in only for a person who is employed (Code 1 in Column 16) or unemployed (employed before) i.e. Code 2 in Column 16. For unemployed (not employed before) i.e. Code 3 in Column 16 and mainly inactive population i.e. any Code from 4 to 8 in Column 16, no information can be furnished in Columns 17 to 21 and hence enter dash (–) in each of these Columns for these persons. Following are the instructions for filling-in Columns 17 to 21 for a person for whom Code 1 or 2 is given in Column 16. The information to be filled-in will relate to employment details of the employed person (Code 1 in Column 16). In the case of unemployed (employed before) i.e. Code 2 in Column 16, the information to be filled-in will relate to last employment held by that person.

Column 17: Employment Period

Give the number of months (rounded off to the nearest month) during which the respondent was employed in *the last 12 months*. In the case of Code 1 in Column 16, the entry in Column 17 may be 06, 07, 08, 09, 10, 11 or 12 if the person was employed for 6, 7, 8, 9, 10, 11 or 12 months respectively during the last 12 months. In the case of Code 2 in Column 16, please note that you have to enter in Column 17, the number of months employed during the last 12 *months only*. The entry in Column 17 will be 00 if the person was not employed during the last 12 months. The entry will be 01, 02, 03, 04, or 05 if the person was employed for 1, 2, 3, 4 or 5 respectively during the last 12 months.

Column 18: Occupation

102. Occupation refers to the name of the job the person did (e.g. cashier, primary school teacher, nurse, blacksmith, watchman, manager etc.).

102.1 You must write the occupation of a person as clearly and as fully as possible. You should not write only "staff member". Probe further to find out whether he/ she was a clerk, statistician, data entry operator etc. Do not write "Casual Labourer" which is rather vague. Find out whether he / she was a construction worker, loader, hand-loom weaver etc. If a person says that he/ she has been doing two or three jobs, find out the job he / she was doing mostly and record the same.

Column 19: Employment Status

- 103. Five categories have been provided for Employment Status or Class. When the answer corresponds to one of these, you should record the appropriate code number. Note that you should record only o*ne code* for each respondent.
- (a) Employer:- Record Code 1 for a person who operates his own enterprise directly or through another person (e.g. a manager or caretaker) and who for the operation of this enterprise hires one or more employees whom he pays. Note that the persons considered employees here exclude unpaid family workers and apprentices.
- (b) Paid Employee:- Record Code 2 for a person who works for a public or private employer and is paid by this employer. All Government Servants, for example, are employees. Payment may also be in kind.
- (c) Own Account Worker:- Record Code 3 for a person who operates his own enterprise (e.g. a farmer cultivating his own land, petty-trader, private doctor, advocate who practices independently) and who *does not employ* anybody to work for him in operation of his enterprise. He or she neither employs anybody nor is employed by anybody, (e.g. a fruit seller who does his or her business all alone).
- (d) Unpaid family worker:- Record Code 4 for a person who helps in running an economic enterprise operated by a member of his or her family without payment of wages or salary (e.g. wife who helps her husband in farming, daughter who helps in hand-loom weaving).
- (e) Other, (specify):- To this category belong all persons who do not fall in any of the above groups. You should write down the person's employment status in the space provided, after recording Code 5 (e.g. 5 Apprentice)

Column 20: Nature of Industry, Trade or Service

104. You have to record here the sector of economy in which a person worked. Examples are: Cultivation, fishing, livestock rearing, selling of vegetables, automobile repairs, manufacture of toys, transport service, school or educational service, sale of clothes (retail), manufacture of eatables etc. If a person works as a sales assistant in a Gas Station his occupation is sales assistant and the nature of his trade is selling petrol (retail). The broad sectors of economy are: (i) Cultivation, fishing, livestock rearing, (ii) Mining or quarrying (iii) Manufacturing, processing, servicing (iv) Repairing (v) Construction (vi) Electricity, gas or water supply (vii) Transport and communication (viii) Trade and Commerce and (ix) Services like domestic service, public service etc. Do not be content with answer like Reaksmey Angkor & Co., Bayon & Co. etc., since from these names alone you cannot record the nature of activity of the Company. Ask probing questions to get information regarding the kind of product (e.g. manufacture of cigarette) or the kind of trade (e.g. Newspaper selling) or the kind of service (e.g. hair dressing) in which the establishment or company is engaged in. If a person is working in a company with several activities, report the nature of the branch of the company in which the person is working. If the person is employed in a Government office or institution, the name of the office, bureau, school, etc., may be given (e.g. Ministry of Planning, Directorate of Agriculture, High court, Phnom Penh High School etc.).

Column 21: Sector of Employment

105. This refers to the sector in which the institution or establishment of the employed person falls. Eight sectors are listed with their codes on the questionnaire.

- 105.1 You have to give one of the appropriate codes as explained below:
- **1. Government** includes State, provincial, district and commune government agencies and ministries.

2. State owned enterprise

This includes financial institutions like the National Bank of Cambodia and all other State –controlled enterprises such as CAMINTEL, Cambodian Pharmacutical Company, Electricity du Combodge, State rubber plantations, State construction enterprises, State fishery enterprises, State printing house, State utilities, State courier and mail enterprises.

- 3. Cambodian enterprise (Private) This includes enterprises or business owned and operated by private Cambodians from a location that is not also a household or private residential dwelling of the owner(s) of the business. Do not include non-profit institutions. If there is a joint venture with any foreign enterprise it will be treated as a Cambodian enterprise (Private) or as a foreign enterprise depending on the share of each. This category includes financial institutions like Cambodian controlled banks and other Cambodian controlled businesses producing goods or services for sale. In brief it includes all private Cambodian enterprises..
- 4. Foreign enterprise These are enterprises or business owned and operated by foreign establishments or persons from a location that is not also a household or private residential dwelling of the owner(s) of the business. Do not include non-profit institutions. Includes foreign controlled financial institutions like foreign controlled Banks (e.g. ANZ Royal, MayBank) and all other foreign controlled businesses producing goods or services for sale.
- **5. Non profit institution** This includes all Cambodian and foreign NGOs providing goods and services for free or for a nominal fee that are not controlled and financed by government. Also included are trade unions, professional associations, political parties, charities, pagodas and other religious institutions, and aid organizations financed by voluntary transfers.

- **6. Household Sector** This includes all businesses operating out of a household or private residential dwelling. Domestic workers should be included here.
- **7. Embassies, International institutions, and foreign aid and development agencies** This includes all persons working for foreign consulates, embassies, foreign aid and development agencies, ADB, IMF, and UN agencies.
- **8. Others, Specify....** This includes institutions not falling in any of the sector described above.

105.2 Some examples for Sector of Employment with their codes are given below: Farmer (Code 3), National Bank of Cambodia Staff (Code 2), Staff of Mobitel (Code 2), Staff of ANZ Bank (Code 4), Staff of UNPFA (Code 7), Staff of Red Cross (Code 5), Vegetable seller or fruit seller (Code 3), Moto dop (Code 3), Guard of a house (Code 6), Staff of MoP (Code 1), Thai Airways staff (Code 4), Maid working in a household (Code 6).

Column 22 Secondary Economic Activity

106. This column has to be filled-in for all persons with one of the codes 1to 8 in col. 16. The purpose of this column is to find out whether the person who was mainly economically active or inactive last year had a second job or a secondary economic activity last year which gave him/her additional income or some income in cash or kind.

Please note that the activity recorded in this column constitutes the secondary activity in the case of those who were mainly employed last year (code 1 in Column 16). In respect of others (codes 2 to 8 in Column 16) it constitutes their marginal activity last year.

A commune chief (or village chief) might have also participated in work in his own farm for some time. His/her main activity is commune administration (or village administration) and secondary activity is unpaid employment in farming. A woman who was a home maker most of the time (Code 4 in Col. 16) could have assisted in farming as an unpaid family worker in her spare time. Her secondary economic activity was unpaid employment in farming. A girl might have been mainly a student. You would have given her Code 5 in Col.16. To earn some money she might work in a house as a maid during her spare time. Her secondary economic activity was maid. A youth who was studying in school might work as a security guard in the night and earn money. His secondary activity was security guard. You have to accept whatever is returned as the person's secondary economic activity.

106.1 If a person had more than one secondary economic activity during last year you have to ascertain in which job he/she spent more time and that job should be considered as his/her secondary economic activity. For example a person whose main activity last year was farming might have worked as

seller of fruits for some time and as a construction worker some other time. You should ask the person to tell in which he/she spent more time. That constitutes his/her secondary activity. It is not necessary that every person should have had a secondary economic activity. Hence some respondents may answer "No" to this question.

106.2 Having ascertained the information, you have to record the answer in terms of a code from the list of codes for col. 22 given below the column. If the person says he had no secondary job or economic activity record Code 01(None).

106.3 Give Code 02 if he/she had worked additionally in farming (i.e. cultivation) without receiving any payment. Code 03 has to be given if he/she was a wage earner working in a farm.

Code 04 should be given for a person with unpaid employment in animal rearing/production (cattle,pigs,poultry etc.). Code 5 should be given for one in paid employment in animal rearing/production. Code 6 will be given for one in fishing(inland or marine).

106.4 Code 07 will be given for a person who had worked or rendered service in any other household based industry producing or servicing any good (both unpaid and paid in cash or kind). Examples are: weaving, pottery, stitching, processing food articles or food items for sale, processing corn and other food crops, drying fish for sale etc. which are carried out at home in which mostly household members are engaged. In rural areas this may be done outside the residence of the household also for want of space e.g. court yard.

106.5 Code 8 will be given for one in construction activities (buildings, structures, bridges, roads, paddy dike etc.). Code 9 has to be given for any wholesale or retail trade run within or outside the household. Code 10 is for a worker in Transport services. Examples of this are cyclo drivers, motodops, Tuk Tuk drivers etc.Code 11 is intended for all other paid employment (other than household-based employment).

106.8 Please note that the secondary economic activity has to be recorded in Col. 22, only if it is a second job or economic activity. For instance if a person was cultivating in his farm and that was his main activity last year and he did not get any supplementary income (cash or kind) from any other economic activity, he did not have secondary economic activity and code to be given is 1.

Column 23: Place of work or schooling

107 This question relates to place of work (main activity) or schooling. Hence it applies only to a person with Code 1 or 5 in Col. 16 (Main activity).

As it does not apply to a person with any of the codes 2 to 4 or 6 to 8 in Col. 16, you have to put a dash in Col. 23 in respect of that person.

108. Column 23: Location of work place or school

For Those with Code 1 (Employed) in Column 16

This relates to an employed person i.e. who has Code 1 in Col. 16. Find out the location of his working place (for main activity not secondary economic activity).

108.1 Give code 1 in the column concerned if his/her work place was at home itself. Put dash in the next sub-column "Name of district, province or country"

108.2 Give Code 2 in the column for code if the work place was a place in the same district as his place of residence. That is if the village of enumeration and village of work place were in the same district. Put dash in the next sub-column.

108.3 Give code 3 in the code column if the place of work was in a district other than the district in which he/she resides. In this case you have to record in the next sub-column the name of the district of his work place and the name of the province of that district in brackets. In case the place of work is across the country's border in a neighbouring country (e.g. Thailand, Viet Nam) give code 4 in the code column and write the name of the country in the next sub-column. Please do not write in the shaded columns which are intended for coding in office

For Those with Code 5 (Full time Student) in Column 16

109 If the person is a student with code 5 in col. 16 you have to give only Code 2, 3 or 4 in the code sub-column of Col.23 according to the answer given. Code 1 does not apply to a student. If the school in which the student was studying was located in the same district as residence give code 2 in code column and put a dash in the next sub-column.

109.1 If the school in which the student was studying was located in a district other than the district in which the student's residence was located, give code 3 in the code column and write the name of the district of the school and its province in the next column.

109.2 If the school in which the student was studying was located in a place across the country's border give code 4 in the code column and write the name of that country in the next sub-column.

Filling-in of Form B Household Questionnaire Part 3: Fertility Information of Females Aged 15 and over Listed in Column 2 of Part 2

- 110. This part of the questionnaire relates to fertility information. These questions will be asked in the case of females aged 15 and over in the household who have already been enumerated in Part 2 of Form B Household Questionnaire. Note that fertility information should be collected for all women aged 15 and above in the household irrespective of their age or marital status. In other words, this will include elderly women and women who were never married, married, widowed, divorced or separated.
- 110.1 You have already listed the names of usual members present and visitors present in the household on Census Night in Column 2 of Part 2. You have also filled-in Columns 3 to 23 of Part 2. Now you have to first identify from Columns 2, 4 and 5 of Part 2, all females aged 15 and over in the household. As an indication that you have identified each such female, you should tick mark the serial number of the female concerned in Column 1 of Part 2. You have to collect fertility information about these women and record them in Columns 4 to 8 of Form B Part 3 of the questionnaire. Following are the instructions for filling-in Columns 1 to 8 of Form B Part 3 of the questionnaire:

Column 1: Serial Number

111. One line should be used for recording information of one woman. Give fresh Sl. No. 1, 2, 3 etc. for each line.

Column 2: Full Name of Woman

112. Copy the names of females aged 15 and more in the household one by one in the same order in which these are recorded in Column 2 of Part 2. This can be done by referring to Full name of the person (Column 2), Sex (Column 4) and Age (Column 5) of Part 2. Please do not add any name here which is not already recorded in Column 2 Part 2 as we are collecting fertility information for females aged 15 and over in the household only. Please also do not omit to copy the name of a woman aged 15 and above just because she is not married or she had no children or she is beyond 50 or 60. You have to copy the names of all women aged 15 and above in the household in Part 3 and then provide the necessary fertility information in each case. In other words, even in the case of a woman aged 15 and above for whom the question of birth does not apply at all, you have to copy her name in Column 2 and write 00 in Columns 4 to 7.

Column 3: Serial Number in Column 1 of Part 2

Please record for each woman, her corresponding Sl. No. in Column 1 of Part 2 which you have identified already and tick marked. For example, if the first woman whom you have recorded here has Sl. No. 4 in Column 1, Part 2 you have to enter 4 in this Column against her name and so on. As you will appreciate, this will enable easy reference.

Columns 4 to 6: Number of Children Born

114. The questions in this Column have been designed in such a way as to elicit the vital information we require without embarrassing the respondents. We have to find out the total number of children born to a woman, number of children living and number of children dead among them. Please remember that the nature of responses you will obtain will depend, to a great extent, on how tactfully you put these questions. Great care must be taken to choose words which, while retaining the exact meaning of the questions, will not give rise to any emotional feelings. Finally, please note that the word "children" in the questions refers to the woman's own offspring of whatever age and sex and not the children of a brother, sister or husband or other relative or non-relative or adopted ones who may be living with her. You should also note that some of the respondents may be old and their memory weak. You should, therefore, exercise patience and help them to recollect the correct number of children born to them. If no child is reported for any of the questions, write 00 in the column concerned.

114.1 It is common experience that the birth of the child may not be reported readily if the child is not actually surviving at the time of enumeration. Infant deaths are still high in the country. There is a chance of a number of such cases being missed unless specifically questioned about. It is necessary to record all live births even if the child has died soon thereafter or had not survived to the day of enumeration. Where a woman first answers that no child was ever born to her, you may perhaps question her as follows: "It has been found in some houses that a child was born and had died soon after or a few days or months later and such cases had not been reported. It is my hope that there are no such cases here. Am I right?" This may bring in the required response. If she reports 'No' then you can be sure that no birth has been missed.

Columns 4: (a) and (b): How many Children have been born alive to the woman? (Separately by males in column (a) and females in Column (b))

115. Record the number of children born alive to the respondent in the space provided, for male children in Column (a) and for female children in Column (b). Give the number in two digits as instructed at the heading of this column. When administering this question care must be taken to ensure that only the number of children born alive to a respondent is recorded. When a child is not born alive it is called a still birth. Still births should not be included while furnishing information in Columns 4 (a) or 4 (b).

116. It is therefore necessary for you to know the definition of live birth (or children born alive). It is as follows:-

Live birth is the complete expulsion (delivery) or extraction from its mother of a product of conception (baby), irrespective of the duration of pregnancy. The baby after such separation, breathes or shows other evidence of life,

such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. Each product of such birth is considered as a live-birth.

To put it in simple terms, a live birth is one in which the baby has cried.

Column 5(a) and (b): How many of them are living? (separately for male children living in Column (a) and female children living in Column (b))

117. Record in the space provided, the number of the woman's own children by sex who are alive. Some of them may be in the same household and others may live elsewhere. You have to record all of them. Remember to include in this category any of the woman's own children who normally live in this household but who are absent at the time of the interview. In some rare cases when the children are away from their mother, she may not know whether all or some of them are living or not. In those cases write the number of children known to be living under Column 5 (a) for male and under Column 5(b) for female. Put an asterisk on that number. In the space provided below the 10th line put the asterisk again and write against it as follows: Note: It is not known whether.... (Write the number) of male and (Write the number) of female children are living or not.

Columns 6(a) and (b): How many of them have died? (separately for male children dead in Column (a) and female children dead in Column (b)

Record in the space provided the number of the woman's own children by sex who are dead. Note that some women may not easily remember the number of their children who have died. Therefore, you should help the respondent to find the correct number by counting your fingers as she mentions the names of the children dead. This is a sensitive question and you must ascertain the answer without wounding the feelings of the respondent.

Note: Make sure that no child is counted more than once or omitted. Please remember that the number of children born alive to a woman should be equal to the total of number of children living and number of children dead.

Column 4 (a) = Column 5 (a) + Column 6 (a) and Column 4 (b) = Column 5 (b) + Column 6 (b).

Column 7: Particulars of Births in the last 12 months

119. This question is aimed at collecting information on births (separately as male or female birth) in the 12 months prior to the date of enumeration to all females aged 15 years and over. Please note that the number of children born alive, already recorded in Columns 4(a) and 4(b), include the child born alive to the woman in the last 12 months. In the case

of older women (say beyond age 50) or widows or divorced women, there may not be any birth in the last 12 months generally. In their cases also you have to fill in this column by entering dash (-). Please, however, remember that occurrence of births is not entirely ruled out in such cases. Only if the child was born alive, you should record 1 under male or female as the case may be. Still birth, i.e., a child which is born dead should not be taken into account for this purpose. So you should make sure that every case of birth of a child born alive, even if it is not alive on the date of enumeration, is reported. You should not reckon it if the child was born lifeless. Suppose a child was born alive then died immediately after birth it is a live birth which should be reported. You have to make sure that any live birth that has occurred to a woman in the last one year is recorded whether the child is surviving till date of enumeration or not.

119.1 If the answer to this question is 'Yes', you should ask whether the child born was male or female. If male, record 1 under male and 0 under female. If female, record 0 under male and 1 under female. If the answer is 'No', enter 0 both under male and female. In case where the woman has had twins, please write 2 under male or female as the case may be. If it was 1 male and 1 female, record accordingly. If there were multiple births enter suitably following this procedure.

Column 8: State who assisted her during the delivery.

120. Ascertain who attended on the woman during delivery of her child in the last twelve months. Please enter the appropriate code from the list given under Col.8. which is reproduced below:

- 1. Doctor
- 2. Nurse
- 3. Midwife
- 4. Traditional Birth Attendant (TBA)
- 5. Other
- 6. None

Note that this question has to be answered only if there was birth in the last twelve months to women aged 15 to 49 (i.e. column 7 has entries other than 0).

Filling-in of Form B Household Questionnaire Part - 4: Housing Conditions and Facilities

121. This part of the questionnaire on housing conditions of the household has to be filled in after completing the main household questionnaire (Form B Parts- 2 and 3). This part should be completed with

the assistance of the head of the household or any responsible member of the household.

- 122. In cases where within a household, members use a variety of facilities, probe to establish the facility used by the majority of household members and record it for the household. For example, if the members of a household use more than one source of light you should record the main source of light used by the majority of members.
- 123. Please note that in this part for columns 1 to 7, 18 and 19, you are required to write only the code corresponding to the appropriate answer in the square provided at the bottom of each column. Under no circumstances you should write more than one code for each question.

Column 1: On what basis does the household occupy this dwelling?

- 124. Four code numbers have been provided for recording the answers to this question. Dwelling here refers to the room or the set of rooms occupied by the household.
- 124.1 Owner occupied: Give Code 1 if the household has a dwelling belonging to either the head or a member of the household for which no rent is being paid. Note that this group includes persons occupying houses or buildings on hire purchase basis or living in houses or buildings built with loan from financial institutions for which full payments have not been made. Note also that even if the head or a member of household owns part of a family house which was occupied by the household you should give Code 1.
- 124.2 Rent: Give Code 2 if the household has been paying rent for its accommodation. Remember that rent here implies the payment of money at the end of a specified period.
- 124.3 Not owner, but rent-free: Give Code 3 if the household has an accommodation free of charge although the house or building is not the property of the head or any member of this household. For example, households staying in family houses free of rent.
- 124.4 Other, (specify): Give Code 4 for any answer not fitting in any of the three categories specified above and specify the basis on which the household occupies the dwelling.

Column 2: Main Source of Light

125. Determine the type of lighting used in the household most of the time and give the appropriate code. The types of lighting and their codes are as follows:

- 1. City power
- 2. Generator
- 3. Both city power and generator
- 4. Kerosene
- 5. Candle
- 6. Battery
- 7. Other, (specify)

Please note that City Power (Code 1) means electricity supplied by Electricity Department or any Agency. Generator (Code 2) refers to private generator used by household.

Column 3: Main Cooking Fuel

126. Find out from respondent the kind of fuel used by the household most of the time for cooking. Give the code for the appropriate item. If two or more kinds of cooking fuel are used, e.g. electricity and LPG; LPG and wood; kerosene and charcoal; etc. give code for the fuel which is used most of the time for cooking.

The codes for the kind of fuel used for cooking are as follows:

- 1. Firewood
- 2. Charcoal
- 3. Kerosene
- 4. Liquefied Petroleum Gas (LPG)
- 5. Electricity
- 6. None
- 7. Other, (specify)

Column 4: Toilet Facility within Premises

127. If toilet facility is not available within premises give code 1 in the square provided. If available ascertain the type of toilet and enter one of the codes 2 to 5 as appropriate in the square.

Column 5: Main Source of Drinking Water Supply

128. Following are the codes for different sources of drinking water supply:

- 1. Piped Water
- 2 Tube/Pipe well
- 3. Protected dug well
 - 4. Unprotected dug well
 - 5. Rain
 - 6. Spring, river, stream, lake/pond
 - 7. Bought
 - 8. Other (Specify)

Give appropriate code for the household's main source of drinking water supply. If there are two or more sources of drinking water supply, give the code of the source used most of the times.

Please note the following in this connection:

Code 1 refers to supply of drinking water by Municipality or any local body by piped connection. In this case even though the household may pay to the authorities for water supplied, it should not be treated as water bought, but considered as piped water. Code 5 Rain includes rain water stored and used. Code 6 should be given in the case of households drawing water directly from spring, river, stream or lake/pond. In some households living near sources like river or lake, arrangements are made to pump water to the premises through pipes using motor pumps. For such households give Code 6 and not Code 1.Code 7 should be given if the household bought water. "Bought" includes water bought by any means like water provided by vendors, water sold in bottles or containers and water from tanker trucks.

Column 6: Location of drinking water source

129. Having ascertained the main source of drinking water for the household in column 5 you have to find out where that source is located. If it is within premises give code 1 in the square, if near the premises give code 2 or if away from the premises give code 3. "Near the premises" refers to a walking distance of about five minutes. "Away" is more than such a distance.

Column 7: No. of rooms occupied by Household

130. Record in the square provided in this column, the number of rooms occupied by the household using code given in the column itself. If a household is in occupation of more than eight rooms you have to record only 8.

130.1 A room should have four walls with a roof and a doorway. It should be wide and long enough for a person to sleep in. In giving the number of rooms occupied by household you should exclude kitchen, store room, bathroom and toilet, which are not normally usable for living or sleeping. A room which is shared by more than one household will not be counted by any of them.

Columns 8 to 17(a) and (b): Facilities owned by the household

131. Eleven items of utility are given one each in columns 8 to 16 and two in Col. 17. Ascertain for each whether the household owns the facility. If not owned write "00" in the square concerned. If owned ascertain how many items are owned and give that number in the square concerned.

132. Columns 18 & 19 State Whether the Household has Access to Internet at Home, outside Home

Column 18: If one or more members of the household have access to internet facility at home give Code 1 in Column 18. If not, give Code 2 in Column 18.

Column 19: If one or more members of the household have access to internet outside home at an Internet Café, browsing center or office or any other place, record Code 1 in Column 19. If not, give Code 2 in Column 19.

Please note that Column 19 should be filled in after ascertaining about access to internet outside home both in respect of those who have access to it at home (Code 1 in Column 18) and those who have no access to internet at home (Code 2 in Column 18).

133. Filling-in of Form B Household Questionnaire Part – 5: Death in Household

This is the last part of the household questionnaire (Form B). This section is considered as part of household questionnaire with very sensitive questions. You should be polite and patient when asking these questions. You should explain to the respondents about this information which is very necessary for studying the mortality rate (per 1000 population), maternal mortality rate and for the calculation of the population growth rate. You should take special care to see that correct information is ascertained; you may have to put probing questions patiently to achieve this.

133.1 Deaths in household in the last 12 months: Total Number of Deaths

Columns (1) to (6) for recording death of any member of household in the last 12 months

This relates to death of any member of household during the last 12 months in the same household. Before recording any death you should know that the death of the person took place when he/she was living in the household. For example a woman who was formerly a member of household during the census had died as member of another household (which she joined after marriage) her death should not be recorded in the census household.

133.2 If a member of the census household died at hospital irrespective of the period of stay in the hospital such death should be recorded as in the census household. If a member of census household was traveling to some place for getting health care and died in that place, it should be recorded as in the census household. For example Nara who is member of household (A) in Kandal fell ill and went to Phnom Penh to receive treatment and stayed in the household of (B) in Phnom Penh. If he died in Phnom Penh, his death should be recorded in household (A) and not in household (B). To determine to which household a member belongs in such cases, six months or more may be treated as the period the person should have stayed in the household to treat him/her as belonging to that household.

133.3 For recording death in household in the last 12 months nine columns are provided. One line should be used for recording one death. The first

column is for the serial number. In column 2 you should write full name of the deceased. In case of infant death where the infant is not given a name, write "INFANT (Kouy Kim Deth's infant)". In column 3 you should fill-in sex of the deceased. In column 4 the relationship to head of household should be filled-in. In column 5 the age at death in completed years of the deceased at the time of death should be recorded. In column 6 give appropriate code for the cause of death of the person. The list of causes of death given on the questionnaire contains one group of codes for illness and another for accidents. The codes from 01 to 11 relate to illness and codes from 12 to 15 for accidents. If there are two or more causes, give the code for one cause only after probing which was the most important cause.

If with all efforts (i.e. discussing with other members etc) you are not able to ascertain the actual cause of death of any person, enter code 16 (Not Known).

134. Columns 7(a), 7(b) and 7(c) for recording Maternal Deaths among Females aged 15-49

These Columns are intended to know whether the death of woman aged 15-49 in the household was a case of maternal mortality. If the woman died while pregnant, during delivery or within 42 days after delivery you should take it as maternal mortality. You would have already noted such a death with Code 09 or 10 in Col. 6. It is possible that initially some other code might have also been given in Col. 6 for the death of woman aged 15-49 who died within 42 days after giving birth. Hence you have to probe carefully to obtain the information for Col. 7 (a), 7(b) and 7(c).

134.1 For Col. 7(a) you should ask and find out whether the death of the woman took place when she was pregnant or during her delivery time or within 42 days after she gave birth to a child. If the answer is "Yes" give Code 1, in Col. 7 (a), if "No" give Code 2 and enter dash in Col. 7(b) and 7(c). If "Yes" in column 7(a) you should record the appropriate code in column 7(b) for the place where the death took place, from the code list given below that column. The codes are:

- 1. Hospital;
- 2. Health Center
- 3. Home
- 4. Other

Further you should record the appropriate code in Col. 7(c) (from the list given below that column) for the person who attended on the woman before her death. The codes to be given are as follows:

- 1. Doctor
- 2. Nurse
- 3. Midwife
- 4. Traditional Birth Attendant (TBA)
- 5. Other (specify).....
- 6. None

CHAPTER - 4

Enumeration of Inmates of Institutional Households

- 135. As already described in Paragraph 27 of Chapter 2, an institutional household is a household of unrelated persons like boarding houses, messes, hostels, residential hotels, rescues homes, jails, pagodas etc. It should be noted that if a group of persons who are unrelated to each other live in a building/structure, but do not have their meals from a common kitchen, then they would *not* constitute an Institutional household. Each such person should be treated as a separate household.
- 136. Institutional households would have already been identified by you during houselisting (see Paragraph 45, Chapter 2). This Chapter relates to enumeration of inmates of these institutions. Only inmates who are present in an institution on Census Night should be enumerated. The officials of an institution like warden, manager, assistant, sweeper etc., who only work in the institution and who do not stay in the institution would be enumerated at their residences and *not* at the institution. Such of those officials who are on night duty at an institution will not be enumerated as inmates of that institution even if they had spent Census Night at the institution. This is because they would have normally stayed in their respective residences at that time but for coming to the institution for work.
- 137. The instructions for filling-in Form A Houselist and Form B Household Questionnaire for an institutional household are consolidated and given below:-

Form A Houselist

(i) In Column 8 of Form A, the name of the institutional household, followed by the designation of its head may be written. If there is no such designation, the name of the recognised head of institutional household may be written.

In the case of institutional household, please write "I" within brackets after the name or designation of the head in this column. Example: Kolab II School Hostel, Manager (I); Mr Srey Rotha (I). Please also write "Institutional Household" in the Remarks Column (Column 13).

(ii) All other columns are to be filled-in as in the case of normal or regular household.

Form B Household Questionnaire

<u>Part 1</u>

- (i) Give Code 2 in the box under "Type of Household/Population".
- (ii) For name of head of household under Identification Particulars follow the instructions given at (i) under Form A Houselist above.
- (iii) Instructions for filling-in other items in Part 1 are the same as for normal household except that for an institutional household, you need not fill-in Statements 1.1, 1.2, 1.3 and the Total Statements in Part 1. You may, therefore, neatly score out this portion in the questionnaire.

Part 2

- (i) Enumeration of inmates of institutions in this part of the Questionnaire will be on the same lines as for normal or regular households.
- (ii) However, while filling-in Column 2 (Full name) and Column 3 (Relationship), please follow the instruction given below:-
 - (a) Copy first the full name of head of the institutional household as given in Part 1 under Name of head of household.
 - (b) For every inmate (other than the head of the institutional household), give Code 7 (Non-relative) in Column 3.

Part 3

(i) Fertility information of female inmates aged 15 and above in an institution will be recorded in this part of the questionnaire following the same instructions as for normal or regular household.

Part 4

This part of the Questionnaire on housing conditions and facilities need not be filled-in for an institutional household. Hence this portion may be neatly scored out.

Part 5

Furnish in this Part, information on death in household in the last 12 months following the instruction given under normal or regular household.

Large sized Institutional Households

138. If there is any institution in your EA with a large number of inmates (say more than ten), you may request the head of that institution

during houselisting round to prepare and keep ready a list of inmates who are likely to stay on Census Night in that institution.

138.1 On March 3, 2008 you should visit the institution again and check the list of inmates prepared by the head of the institution. Names of persons who did not spend Census Night in the institution should be deleted from the list while those who were not listed, but who spent Census Night in the institution should be included. You should then enumerate all the persons appearing in the updated list.

CHAPTER - 5

Enumeration of Homeless Households, Boat Population and Transient Population

Homeless Household

- 139. This type of household includes households who do not live in a building or structure (e.g. those who live on the road side, pavements, park, in open space outside a pagoda or market etc.). Such population in your EA should be enumerated around midnight of March 3, 2008 i.e. on Census Night itself. In order to do this you will have to take note of the possible places where such population normally live in your EA. You can do this during houselisting. Please, however, note that since such population live in the open, without a building or structure, they will not be listed in the houselist (Form A). You will have to cover all such homeless households and enumerate them in Form B on the Census Night. If there is likely to be a large number of homeless persons in your EA., you may not be able to enumerate single-handed in one night. You should report this fact to your supervisor in advance so that one or more extra enumerators can be appointed to assist you in the one-night enumeration of such homeless persons. Beggars, vagrants and persons of unsound mind who live without a shelter have to be enumerated as homeless population and should not be missed.
- 140. The Instructions for filling-in Form B Household Questionnaire for homeless household are given below:-

Form B Household Questionnaire

<u>Part 1</u>

- (i) Give Code 3 in the box under "Type of Household/Population".
- (ii) In Identification Particulars, fill in the Building No. as 999 in respect of homeless households. The Household No. could be 01, 02 etc., for the homeless households in the EA. In other words, if there are 20 such households in the EA., the Building No. will be 999 for each of them and the Household Nos. will be 01, 02... 20.
- (iii) Instructions for filling-in other items in Part 1 are the same as for normal household except that for a homeless household, you need not fill-in Statements 1.1, 1.2, 1.3 and Total Statements in Part 1. Therefore, this portion of the questionnaire may be neatly scored out.

Part 2

Enumeration of homeless household in this part of the Questionnaire will be on the same lines as for normal or regular households.

Part 3

Fertility information of females aged 15 and above in a homeless household will be recorded in this part of the questionnaire following the same instructions as for normal or regular household.

Part 4

This part of the Questionnaire on housing conditions and facilities do not arise for homeless household. Hence this portion may be neatly scored out.

Part 5

Furnish in this Part, information on death in household in the last 12 months following the instruction given under normal or regular household.

If you find a group of homeless people in your EA who are unrelated (e.g. street children) you should fill in their particulars in the same Form B continuously (treating it as a household of unrelated members) starting from any one of them (as head of household) and recording all others as non-relatives (code 7) for the purpose of Column 3: Relationship.

Boat Population

141. Persons living in boats which are on the move are referred to as boat population. They will be enumerated on Census Night. Before enumeration, boats found in an EA will be given separate three digit numbers as follows:- B001, B002 etc. The letter B before the number indicates it is a Boat number. This number will be prominently written on the boat with chalk piece or on the sticker affixed. Please note that Form A Houselist will not be filled-in for boats. Separate Form B should be filled-in for people in boats treating each boat as a separate building or structure. In identification particulars in Part 1 of Form B boat number should be written under building number. Give Code 4 in the box under "Type of household/Population". Instructions for enumerating the boat population will be the same as for normal households except that (1) Statements 1:1, 1:2 and 1:3 and Total Statements in Part 1 of Form B will not be filled in and (2) Part 4 of Form B will also not be filled in and may be neatly scored out.

Transient Population

This category of population includes the following: (i) persons who stayed on Census Night in airports, railway stations, bus stands, harbours, ferries and in carts (as travellers) (ii) nomadic population who camped on Census Night in a village (iii) persons who on Census Night stayed in ships within the Cambodian territorial waters and (iv) persons who stayed on Census Night at international border posts. Houselist (Form A will not be filled in for transient population

Enumeration of transient population will be done in Form B following the same instructions as given for homeless households. But in the case of transient population, apart from Statements 1.1,1.2 and1.3 of Part 1, and Part 4, Part 3 and 5 also need not be filled in. Hence, Statements 1.1,1.2 and 1.3 of Part 1, Parts 3, 4 and 5 may be neatly scored out in the case of transient population. However, please note that in the case of transient population you have to give Code 5 in the box under "Type of Household/Population" in Part 1. You should also indicate on the dotted line above the box, the place where such population is found (e.g. Phnom Penh Railway Station, Ship Sorya in the harbour). Special arrangements will be made to enumerate transient population on Census Night.

General

The following statement is given to guide you readily regarding filling-in of Form A / Form B for different types of households.

Code	Type of	Form		Fori	n B:		
to be	household	A	Statements	Part	Part 3	Part	Part 5
given			1.1, 1.2, & 1.3	2		4	
in			and total				
Part			number of				
1			persons for				
Form			these				
В			statements in				
			Part 1				
1.	Normal/Regular	$\sqrt{}$	$\sqrt{}$	$\sqrt{}$		$\sqrt{}$	
2.	Institutional	$\sqrt{}$	X		$\sqrt{}$	X	$\sqrt{}$
	household						
3.	Homeless	X	X		$\sqrt{}$	X	$\sqrt{}$
	Household						
4.	Boat	X	X		V	X	
	Population						
5.	Transient	X	X		X	X	X
	Population						

Note:. Tick ($\sqrt{\ }$) mark means you have to fill in. Cross (x) denotes that you need not fill in.

CHAPTER - 6 Preparation of Enumerator's Summary

After completing enumeration of a household, you should fill in Census Form 2 called Enumerator's Summary (Appendix VI). You should fill in the identification particulars carefully. The figures which you furnish in this Summary will be used for compiling provisional results. You should not, therefore, make any arithmetical or posting mistake. Thirty lines are provided in the Enumerator's Summary. You may abstract the required information of each household one by one from the columns concerned in Form B Part 2 and record in this Form. The number of Forms required depends on the number of households in the EA. Give page number at the right hand top for each Form used. Each line in this Form is to be used for one household. The last line is for giving total of each column. In Column 3 you have to count the number of households and give it in the total Column. In each page the total for each page may be given. In the last page the grand total for EA as a whole may be given. The procedure to fill in columns 2 to 8 of the Enumerator's Summary is explained below:

Columns 2 and 3: Building No. and Household No.

144. In these two columns copy the Building Number and Household Number of each household from the Identification Particulars given at the top of Form B Part 1 filled-in for the household.

Column 4: No. of Questionnaires used

145. You should write here the number of Form B used for the household. You must have already recorded this number in the square at the left hand bottom of first page of the first Form B used for the household.

Columns 5 to 7: Population

146. You should count the number of males (Code 1) from Column 4 of Form B Part 2 and record the number in Column 5 of this Form. Count the number of females (Code 2) from Column 4 of Form B Part 2 and record the number in Column 6 of this Form. Add Columns 5 and 6 and record the number of persons in Column 7. Check whether this tallies with the last serial number in Column 1 of Form B Part 2. Do not copy the population figures from the Houselist Summary. What we are interested in here is the Census population and not the Houselist population.

Column 8: Type of Household/Population

`147. For each household you have to indicate in this Column its type. Record Code 1 for Normal or Regular household, 2 for Institutional Household and 3 for Homeless Household, 4 for Boat Population and 5 for Transient Population.

Column 9: Remarks

148. In the Remarks Column you may record any useful information based on your observation.

Documents to be handed over to Supervisor

- At the end of enumeration, you have to give an account of questionnaires received in Census Form 3 given in Appendix VIII. You have to get a Certificate in Census Form 4 from the Village Chief concerned (Appendix IX) that you have completely covered all households during enumeration. After you have carefully checked the entries and the totals in the questionnaires and summary statements as mentioned in this manual, you have to return the following materials placed in folders to your supervisor and obtain acknowledgement:
 - (a) All questionnaires i.e. Form A and Form B arranged separately for completed, cancelled and unused. Note that the total number returned should be equal to the number received by you.
 - (b) Completed Form 1 Houselist Summary
 - (c) Completed Form 2 Enumerator's Summary
 - (d) Completed Form 3 Account for Questionnaires Received
 - (e) Completed Form 4 Certificate from Village Chief
 - (f) Village/Enumeration Area Map
 - (g) Enumerator's Manual

150. If you follow the instructions contained in this manual carefully you should feel proud to have accomplished a national task well. In Appendix X, you will find some specimen entries of Form A Houselist, Form B Household Questionnaire, Census Form 1: Houselist Summary, Census Form 2: Enumerator's Summary and Census Form 3: Account for Questionnaires Received.

Appendices

- Appendix I: Form A Houselist (page 13 paragraph 30) (Page7 paragraph 8) (Page 9 paragraph 14)
- Appendix II: Form B Household Questionnaire (page 20 paragraph 52) (Page7 paragraph 8) (Page 22 paragraph 55)
- Appendix III (A): Specimen Village Map (Page 13 paragraph 29.2)
- Appendix III (B): Specimen Enumeration Area Map after updating (Page 13 paragraph 29.2)
- Appendix IV: Houselist Summary (Census Form 1) (Page 19 paragraph 50)
- Appendix V: Procedure to correct Form A Houselist during Enumeration when new

households not already included in Form A are found (Page 21 paragraph 54.2)

- Appendix VI: Enumerator's Summary (Census Form 2) (Page 61 paragraph 143)
- Appendix VII: Call Back Card (Page 23 paragraph 63)
- Appendix VIII: Account for Questionnaires Received by Enumerator (Census Form 3)

(Page 62 paragraph 149)

- Appendix IX: Certificate by Village Chief (Census Form 4) (Page 62 paragraph 149)
- Appendix X: Specimen Entries in Form A, Form B, Census Form 1, 2 and 3 (Page 62 paragraph 150)

Procedure to correct Form A during Enumeration when new households not already included in Form A are found.

You should first make sure these households were there on Census Night. If so, you must enumerate persons in these households according to the laid down procedure. Simultaneously you should correct Form A as follows:-

(i) New household or households found in a building already listed in Form A.

Suppose Line No. and Building No. (Columns 1 and 2) of this building are 6 and 004 and there is already one household entered against this building. Let the last Line No. and Building No. in Form A of the EA be 110 and 103. You have to number the new household as (2) and fill in line No. 111 of Form A as shown under Example I (See next page).

Follow the same procedure if there are more than one new household in this building with the difference that the household numbers will be (3), (4) etc. in Column 7.

Please note that Particulars in Column 8 to 12 are illustrative only.

(ii) New household or households found in a building not listed in Form A.

Let the last Line No. and Building No. entered in Form A of the EA be 91 and 089. You have noticed late that one building with one household was missed when you listed before. The building missed was next to a building on line No. 10.

You may number that missed building as 090 irrespective of its location and enter at the end of Form A as shown under Example II (See next page).

The same procedures may be followed if there are more than one new building. You may use additional Form A if necessary.

Please note that the particulars in Columns 3 to 12 are illustrative only.

Example I

Line	Building/	Predomi	nant Cons	struction	Purpose of Building/Structure	Househo	old	Particulars of Head of Hous	ehold	Number of	Persons Usu	ally	Remarks
