Glossary Code	Glossary	Description
99090	Area sown	Refers to the area on which sowing or planting has been carried out, for the crop under consideration, on the soil prepared for that purpose. The area is usually reported net of uncultivated patches, footpaths, ditches, headlands, shoulders, shelterbelts, etc. For tree crops, the gross concept may be applied. With regard to mixed and associated crops, countries are requested to report the area sown for each crop separately. When the mixture refers to particular crops, generally grains, it is recommended to treat the mixture as if it were a single crop. Data are recorded in hectares (ha). The information on area sown allows for a particular application of the SUA system where the quantity allotted for next year's sowing, which enters the account of this year, is calculated as a seeding rate times the area sown of the next year.
