

Sampling Procedure and Reliability of Estimates

1. Sampling Policy

In the 2023 Housing and Land Survey, a stratified two-stage sampling method was used. The first-stage sampling unit was an enumeration district (ED) of the 2020 Population Census ^{*1}, and the second-stage sampling unit was a dwelling unit located in an enumeration unit district (EUD) that was formed from the sample ED.

2. Stratification of EDs

EDs were stratified based on the number of households in each ED, tenure of dwelling, type of building, etc. ^{*2} (see Table A).

3. Method of the Sampling

(1) Sampling of Designated EDs ^{*3} (First-stage sampling)

The procedure for sampling designated EDs from among all EDs nationwide was as follows:

a. Calculation of the number of designated EDs by city, ward, town and village

The minimum number of sample EDs required to achieve the target accuracy (relative standard error of 5% or less for cities and wards, and 10% or less for towns and villages with a population of 15,000 or more ^{*4}) was calculated for each city, ward, town and village. Based on this calculation, the number of designated EDs for each city, ward, town and village was calculated, taking into consideration the levelling of local administrative tasks and the maintenance of accuracy at the national and prefectural levels.

b. Sampling of EDs

The designated EDs were systematically sampled using sampling weights for each stratum, based on the stratification criteria in Table A, after arranging the EDs stratified by municipality for cities, wards, towns and villages with a population of 15,000 or more, and by prefecture for other towns and villages.

It should be noted that the administrative districts of cities, wards, towns and villages are based on the status as of July 1, 2022.

c. Designation of EDs for Questionnaire A and B

i. Designation of EDs for Questionnaire A

Among the designated EDs, the EDs other than those specified in ii below were designated.

ii. Designation of EDs for Questionnaire B

For items surveyed only in Questionnaire B, in order to achieve the target accuracy (relative standard error of the number of households owning additional dwelling sites other than the site of their current dwelling of 5% or less in prefectures and 7% or less in government ordinance-designated cities), for prefectures with government ordinance-designated cities (special wards are treated as a single city), systematic sampling was conducted by government ordinance-designated city and other areas, and for other prefectures, systematic sampling was conducted by prefecture from the designated EDs sampled in b above.

(2) Sampling of Enumeration Unit Districts (EUDs)

In principle, a sample ED constituted an EUD. However, for those sample EDs with a number of households exceeding a certain number were divided into two or more sections so that the number of households in each section would be approximately equal, and one section randomly selected from among them constituted an EUD.

(3) Sampling of Dwellings (Second-stage Sampling)

Seventeen dwellings were randomly sampled from each of the EUDs.

4. Method of the Estimation

- (1) For each tabulated area, the total number of household members (population) surveyed in each EUD was multiplied by a linear estimation coefficient (the product of a to c below) and then added together.
 - a. The reciprocal of the sampling ratio of dwellings surveyed in the EUD (total number of dwellings of the EUD / number of surveyed dwellings of the EUD)
 - b. If the designated ED is sectioned into EUDs, the number of such sections
 - c. The reciprocal of the sampling ratio in the stratum to which the designated EDs containing the EUDs belongs (number of EDs in the stratum / number of designated EDs)
- (2) Based on the above, the ratio estimation multiplier was calculated so that the restored population would correspond to the total population by city, ward, town and village as of October 1, 2023.
- (3) For each tabulated area, the estimated values were calculated by multiplying the survey results by the linear estimation multiplier and the ratio estimation multiplier for each EUD.

5. Reliability of the Estimates

The relative standard errors of estimates for whole Japan are shown in Table B and Table C. The relative standard errors by principal tabulation item shown in Table C are calculated as follows:

- by using 10 sub-samples for items common to Questionnaires A and B and for items for Building Survey sheets;
- by using 5 sub-samples for items only for Questionnaires B.

The values in Table B are evaluated on average by fitting a curve for all calculated values.

The values shown in Table B are used for the real numerical values (e.g., the number of households, dwellings, etc.), and not used for the rate (e.g., the average and increase rate of the number of dwelling rooms per dwelling, *tatami* units of dwelling rooms per person, etc.).

Notes:

1. The following EDs of the 2020 Population Census were excluded from the sampling: EDs of prisons or detention centers (Category No. 5 of enumeration district number of the Population Census), EDs of camps of the Self-Defense Forces (Category No. 6), EDs of areas exclusively used by the U.S. Military Forces (Category No. 7), and EDs of water surface (Category No.9). (The same applies below).

Due to the effect of the Fukushima nuclear accident caused by the Great East Japan Earthquake, certain districts designated as evacuation zones in Minamisoma-shi, Tomioka-machi, Okuma-machi, Futaba-machi, Namie-machi, Katsurao-mura, and Iitate-mura have been excluded from sampling. These districts are thus not included in the results of the Survey.
2. Based on the results of the 2020 Population Census.

3. Refers to the ED for conducting administrative tasks related to the establishment of units as stipulated in Article 12, Paragraph 1 of the Housing and Land Survey Regulations (Prime Minister's Office Order No. 41 of 1982.)
4. The target accuracy applies to the number of dwellings in the following seven categories:
Occupied, Detached houses, Owned houses, Equipped with facilities for aged persons, etc., Constant barrier-free houses,
(Minimum housing area standard) Exceeding housing standard and (Targeted housing area standard) Exceeding housing standard

Table A. Criteria and Codes for Stratification of the EDs of the 2020 Population Census

Criteria for stratification	Code	Sampling weight
EDs containing quasi-households with more than 50 persons	010	1
EDs which have no inhabitants or 17 households and under	020	1
EDs with more than 18 households		
EDs where the ratio of ordinary households residing in Urban Renaissance Agencies, public corporations, etc., is 30% or more	110	2
EDs where the ratio of ordinary households residing in Urban Renaissance Agencies, public corporations, etc., is 10% or more	120	2
EDs where the ratio of ordinary households residing in issued housing is 50% or more	210	2
EDs where the ratio of ordinary households residing in issued housing is 30% or more	220	2
EDs where the ratio of ordinary households residing in issued housing is 10% or more	230	2
EDs where the ratio of ordinary households residing in rented houses owned by local government is 30% or more	310	2
EDs where the ratio of ordinary households residing in rented houses owned by local government is 10% or more	320	2
EDs where the ratio of ordinary households residing in rented houses owned privately is 50% or more		
EDs where the ratio of ordinary households residing in apartments with two stories or less is 50% or more	410	2
EDs where the ratio of ordinary households residing in apartments with three stories or more is 50% or more	420	2
Other EDs	430	2
EDs where the ratio of ordinary households residing in owned apartments is 50% or more	510	2
EDs where the ratio of ordinary households residing in owned detached houses is 95% or more	610	2
EDs where the ratio of ordinary households residing in owned detached houses is 80% or more	620	2
EDs where the ratio of ordinary households residing in owned detached houses is 65% or more	630	2
EDs where the ratio of ordinary households residing in owned detached houses is 50% or more	640	2
Other EDs	910	2

Note. If an ED corresponds to more than two strata, it is classified into the one with the smallest code.

Table B. Relative Standard Error by Size of Estimate - Japan

Results of the table using questionnaire A and B

Size of estimate	Result for Japan	
	Standard Error	Relative Standard Error(%)
30,000,000	28,151	0.094
