

Appendix 3

Sampling Method, Estimation Method of Results and Sampling Error of the Estimates

1 Sampling Method

Using statistical methods, “the Monthly Survey on Service Industries” takes samples from establishments and enterprises, etc. throughout the country that existed at the time of the 2014 Economic Census for Business Frame engaging mainly in the industries listed in (1) below. Sample sizes are as follows.

Establishments; Approximately 25,000

Enterprises, etc.; Approximately 13,000

Note: The population of the survey was changed from the 2009 Economic Census for Business Frame to the 2014 Economic Census for Business Frame since 2017 in the survey. Establishments, enterprises, etc. are extracted based on the 2014 Economic Census for Business Frame. Establishments and enterprises, etc. newly established after the implementation of the 2014 Economic Census for Business Frame are also added to the population to implement appropriate sampling, based on various information collected in the subsequent years. When an establishment closes down, a replacement establishment is selected and added to the subjects of the survey.

Difficult-to-Return or Restricted Habitation Areas that the Director-General of the Nuclear Emergency Response Headquarters (NERH) has set as of April 2014, in accordance with the provision of Article 20-2 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (Act No. 156 of 1999) concerning the Great East Japan Earthquake, are excluded from the results of the survey, since these areas were not included in the 2014 Economic Census for Business Frame.

(1) Coverage of the Survey (Refer to Appendix 6)

The survey covers industries classified in divisions designated by the Japan Standard Industrial Classification (Rev.13, October 2013) as shown below (except for the group “Establishments engaged in administrative or ancillary economic activities” set for each major group).

- G Information and communications
- H Transport and postal activities
- K Real estate and goods rental and leasing
- L Scientific research, professional and technical services
*Excluding the major group “71 Scientific and development research institutes” and the industry “7282 Pure holding companies”
- M Accommodations, eating and drinking services
- N Living-related and personal services and amusement services
*Excluding the group “792 Domestic services”
- O Education, learning support
*Excluding the major group “81 School education”
- P Medical, health care and welfare
*Excluding the group “841 Public health centers”, “851 Social insurance organizations” and “852 Welfare offices”
- R Services, n.e.c.
* Excluding the major group “93 Political, business and cultural organizations”, “94 Religion” and “96 Foreign governments and international agencies in Japan”

(2) Sampling and Sample Rotation

A. Enterprises, etc. (census group)

- (a) The survey is conducted on all enterprises, etc. mainly engaging in the following industries.
 - (i) Group "371 Fixed telecommunications"
 - (ii) Group "372 Mobile telecommunications"
 - (iii) Group "381 Public broadcasting except cablecasting"
 - (iv) Major group "42 Railway transport"
 - (v) Major group "46 Air transport"
 - (vi) Major group "49 Postal activities including mail delivery service"
- (b) The survey is conducted on all enterprises mainly engaging in the service industries other than those in (a) above, with capital, investment, or funds worth 100 million yen or more.
- (c) The survey is conducted on a continuing basis without being replaced.

B. Establishments (census or sample survey group)

Establishments are extracted from those mainly engaging in service industries other than those in A.(a) above, excluding establishments that belong to the enterprises, etc. falling under the A.(a) and (b) above.

- (a) The Census is conducted continuously for establishments over a certain scale.
- (b) The sample survey is conducted for establishments other than (a) above. In principle, the survey continues for two years.

2 Estimation Method of Results

The results of the Monthly Survey are aggregated by adding the estimates of enterprises etc. and establishments. These estimates are calculated after complementing missing values and correcting inconsistencies in answers by using the Economic Census and other public information of survey objects.

The sales and the number of persons working at the location of establishment (hereinafter called "the number of persons") are calculated based on the results of the 2014 Economic Census for Business Frame, etc. The formula is as follows:

Estimate of total sales or estimate of the number of persons: $\hat{T}_x = \sum_{h=1}^L W_h \sum_{i=1}^{n_h} x_{hi}$

h : Strata by industry, size of the number of persons and type of survey (census or sample)

W_h : Weight, $\frac{N_h}{n_h}$ ($N_h = n_h$ and $W_h = 1$ for census survey)

L : Number of strata

N_h : Number of population establishments in h -th stratum

n_h : Number of survey establishments in h -th stratum

x_{hi} : Sales or the number of persons for i -th establishment in h -th stratum

3 Sampling Error of the Estimates

Sampling errors for total sales are estimated by the following formula. The results can be seen in the table.

The standard error rate (%): $\hat{\sigma}_{T_x} / \hat{T}_x \times 100$

Standard error of total sales: $\hat{\sigma}_{T_x} = \sqrt{\sum_{h=1}^L N_h (N_h - n_h) \frac{s_h^2}{n_h}}$

Sampling variance for sales in h -th stratum: $s_h^2 = \frac{1}{n_h - 1} \sum_{i=1}^{n_h} (x_{hi} - \bar{X}_h)^2$

Mean of sales in h -th stratum: $\bar{X}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} x_{hi}$

Table Sampling Error for Monthly Sales of the Estimates by Industry

(%)
