ECONOMIC ACTIVITY OF FEMALE HEAD OF HOUSEHOLD

The number of female heads of households has increased from 1998 to 2008 (Table 5.7). But their economically active rate has slightly decreased in the whole country from 86.9 percent to 86.2 percent. This rate is higher than that of the total females in both two Censuses (73.5 percent in 1998 and 76.0 percent in 2008; Table 1.3).

Figure 5.6 Female's Relationship to the Head of Household by Age Group

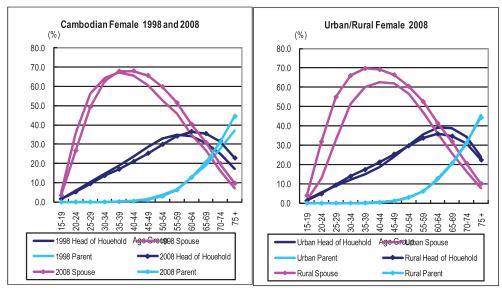

Table 5.7 Economically Active Female of Households Head (aged 15 and over) by Age Group, 1998 and 2008

		Number of Perso	Economically Active Rate				
	19	98	20	08	LCOHOITICALLY ACTIVE NAIE		
Age group	Female Head of Household	Economically Active Female Head	Female Head of Household	Economically Active Female Head	1998	2008	
15+ Total	554,328	481,947	718,287	619,409	86.9	86.2	
15-19	10,066	7,275	10,788	6,223	72.3	57.7	
20-24	22,681	20,237	32,902	29,634	89.2	90.1	
25-29	46,930	42,643	56,520	52,166	90.9	92.3	
30-34	59,698	55,012	48,115	45,206	92.2	94.0	
35-39	69,648	65,326	73,474	69,429	93.8	94.5	
40-44	69,536	65,469	81,830	77,037	94.2	94.1	
45-49	68,203	63,605	89,040	82,864	93.3	93.1	
50-54	59,096	53,284	87,580	79,045	90.2	90.3	
55-59	50,995	43,889	77,804	67,557	86.1	86.8	
60-64	40,167	30,785	58,562	46,604	76.6	79.6	
65-69	29,062	20,247	44,603	32,641	69.7	73.2	
70-74	16,398	9,000	29,903	18,077	54.9	60.5	
75 +	11,848	5,175	27,166	12,926	43.7	47.6	

There is a big disparity between urban area and rural area (Table 5.8). The economically active rate of female head of household in urban areas is 66.7 percent, and the rate in rural areas is 90.8 percent. Those rates are higher than that of the total women who aged 15 and over in urban areas and in rural areas (59.1 percent in urban areas and 80.8 percent in rural areas Table 1.2).

Table 5.8 Economically Active Female Head of Households (aged 15 and over) by Age Group: Urban/Rural 2008

		Number of Perso	Economically Active Rate				
	Urban		Rural		Economically Active Rate		
Age group	Female Head of Household	Economically Active Female Head	Female Head of Household	Economically Active Female Head	Urban	Rural	
15 + Total	136,998	91,343	581,289	528,066	66.7	90.8

Figure 5.7 Economic Activity Rate of Female Household Head by Age Group: 1998, 2008 Urban/Rural

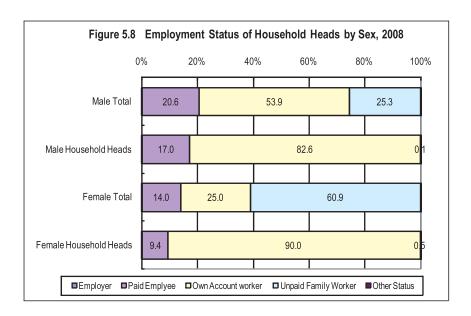

Note) Economic Activity Rate of Female Household Head is based on females living in a normal households

The economically active rate of female household heads by age group is graphed in Figure 5.7. This figure depicts another character of labour participation of female heads of households. The downward curve of the economically active rate of female heads of households in rural areas starts at older ages than that of the total females. The downward curve of the economically active rate of female heads in urban areas starts at younger age than that of the total females in 2008. The reason behind this phenomenon is not clear from these figures. But it is at least notable that the economics in urban area may affect women's labour participation in a certain form.

EMPLOYMENT STATUS

As previously described, the typical employment status of Cambodian females is an 'Unpaid family worker' of agricultural sector (see chapter 2 for detail). Figure 5.8 shows the employment status of the total males, of the total females, and of household heads of sex.

Figure 5.8 indicates that the employment status of household heads is significantly different from that of the total population of both sexes. One out of four males is an 'Unpaid family worker'. The proportion is higher for females (3 out of 5). However, as for a head of household, the proportion of 'Unpaid family worker' is less than 1 percent for both sexes. The majority of heads of households of both sexes are 'Own account workers'. Most of 'Own account workers' are engaged in agriculture sector in rural areas, and 'Whole sale and retail trade' sector in urban area (see Table 5.4). The proportion of 'Paid employees' of female heads of households is around 10 percent, which is less than the proportion of the corresponding males and the total females.

5.2.2 Employment of Women and their Children

Table 5.9 shows the average number of surviving children per female by usual activity status. They are graphed in Figure 5.9. The average number of children per female has decreased by 0.39 children (from 2.53 to 2.19) during the period between the two censuses. The number of children a female has had little effect on her economically active rate in 1998. But it has made a slight effect on the rate in 2008. On the whole, the average number of children of economically active females is greater than that of inactive females. However, the average number of children economically active females in urban areas have is much lower than that for those rural counterparts (1.50 and 2.54, respectively), and lower than that of inactive females in urban areas.
